Meeting records 📄 Transcript

Summary

Team members reviewed Brand OS development progress and discussed leveraging the platform for corporate sales opportunities.

Brand OS Platform Progress

Development now utilizes a hub-and-spoke model to automate content, knowledge management, and multi-tenant operations for mid-tier brands. Scaling the platform to 10 dealers and multiple hubs within 1 year was established as the primary growth goal.

Client Opportunity Exploration

Participants identified a strategic opportunity to pitch the application to a potential client by leveraging existing professional relationships. The team will focus on showcasing creative capabilities and advanced analytics to demonstrate high-level value.

Administrative and Operational Logistics

Team members aligned on the need to finalize bank account setup to enable payment infrastructure for upcoming product launches. Launch efforts for current software projects remain on schedule for the coming weeks.

Decisions

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

ALIGNED

- **Expanded platform support for Backup Bison** Backup Bison will expand video platform support to include services beyond Vimeo.

Next steps

- ☐ [Nel Santiago] Review Package: Review the notes package provided by Cindy. Load the data into quad for analysis.
- ☐ [Nel Santiago] Contact Val: Reach out to Val to schedule an introduction meeting with Justin Lobaito regarding the Crash Champions AI opportunity.
- ☐ [Nel Santiago, Alexandra Chacon] Set Up Banking: Meet on Thursday to complete necessary paperwork for setting up the bank account.
- ☐ [Nel Santiago] Finish Company Setup: Finalize Lemon Squeezy payment integration and complete the LLC registration after banking details are secured.
- ☐ [Alexandra Chacon] Send Meeting Invite: Send a Google Meets invitation to Nel Santiago for the Thursday bank account paperwork session.
- ☐ [Nel Santiago] Update Val Schedule: Inform Val about Justin Lobaito's availability for a follow-up discussion on Friday.

Details

- **Personal Check-ins and Current Work Status:** The discussion began with Nel Santiago sharing their recent difficulty dealing with illness and the stressful "Lincoln Project stuff". Justin Lobaito mentioned they were extremely busy but noted their workload was not inherently bad; they are working to wrap up three large projects put on hold during a

recent move so they can focus on product-type work. Nel Santiago noted the difficulty of balancing a day job, raising children, and maintaining freelance work ([00:01:02](#)).

- **AI and Day-to-Day Operations:** Justin Lobaito mentioned that AI is helping to make their day job easier. Nel Santiago acknowledged receiving notes from Cindy regarding a backup device issue, which they have not yet had a chance to review, but they suspect the issue relates to OS targeting ([00:01:02](#)). Nel Santiago is prioritizing their personal time by planning to adjust their work schedule to be off at 6 PM to spend time with their partner and baby ([00:02:02](#)).
- **Discussion of Justin Lobaito's Application Development:** Alexandra Chacon initiated a discussion about Justin Lobaito's application, expressing a desire to share their thoughts and run them by them. Justin Lobaito mentioned they had done "crazy crazy stuff" with the application in the last few weeks, including preparing materials for a meeting with a manufacturer, which was ultimately postponed due to high travel costs ([00:03:03](#)).
- **Implementation of New Features in the Application:** In the process of preparing for the manufacturer meeting, Justin Lobaito implemented several cool features. A key learning has been the concept of creating project-based wikis and an LLM (Large Language Model) wiki contained within the project to store all project knowledge ([00:04:15](#)). Justin Lobaito is currently re-scaffolding the application and incorporating a client-side view, laying the foundation for multi-tenant operations (e.g., distributor view, manufacturer view, individualized client views) ([00:05:38](#)).
- **Automated Routines and Centralized Knowledge:** Justin Lobaito demonstrated the application's functionality, noting they have launched six sites on the platform. They are using a centralized knowledge base in conjunction with routines, running four different routines at different time intervals, which helps manage and ingest information ([00:05:38](#)). The LLM wiki is also running at a centralized level to ingest meeting notes and help prioritize follow-up actions and daily focus ([00:06:59](#)).
- **Hub and Site Structure for Information Dissemination:** Justin Lobaito explained the application's structure, which involves "hubs" as the centralized source of information and "sites" (representing dealers or clients) that read from them. The system is designed so that a hub can be resold and ingested with all brand knowledge; information collected from individual sites (e.g., conversations with a dealer) feeds back into the hub to provide context and knowledge for all other sites ([00:07:51](#)).
- **Managing Customization and Competitive Products:** Alexandra Chacon inquired about how the system handles different groups of dealers needing varying updates, specifically asking if a smaller group could opt out of an update. Justin Lobaito confirmed that this customization is possible, citing an example where a dealer was allowed to include competitive drones (e.g., DJI Agras T100) on their site, which was

incorporated into the canonical knowledge base during the onboarding process ([00:09:15](#)). The system uses canonical information and web scraping to populate site details on a per-site basis according to the dealer's specific offerings and design choices ([00:10:25](#)).

- **Future Vision as a Brand Operating System (Brand OS):** Justin Lobaito introduced the concept of Brand OS, which is envisioned as an entire centralized operating system for mid-tier brands that utilize a spoke-and-hub model for disseminating information ([00:11:43](#)). The plan is for the product to evolve into a Software as a Service (SaaS) model, where multiple manufacturers or distributors run inside the platform. The current vision involves Justin Lobaito or a dedicated account person managing client information and feeding it back into the system ([00:13:57](#)).
- **Automation and Daily Routines for Learning and Design:** The Brand OS utilizes automated routines, including a daily process that hits an API to gather the latest design trends and fills in design gaps for various themes (e.g., patriotic, tactical, agricultural) ([00:13:57](#)). The system also performs a daily ingest of drone news, scraping sources like Reddit, and is designed to produce executive summaries for manufacturers/distributors suggesting potential market shifts, opportunities, and weaknesses ([00:15:29](#)).
- **Scalability and Business Model Concerns:** Alexandra Chacon and Nel Santiago raised concerns about the current model's dependence on Justin Lobaito's capacity, noting that it limits the number of clients they can manage ([00:17:40](#)). Alexandra Chacon suggested that they are currently selling themselves, not the application, and questioned if the product could be packaged as a "do-it-yourself" model to sell to larger companies with internal teams. Justin Lobaito agreed that this is an evolution for higher-tier clients, setting a stretch goal of getting 10 dealers on the platform in two months and two to three hubs (distributors or manufacturers) in a year ([00:18:38](#)).
- **Packaging and Future Marketing Services:** Justin Lobaito acknowledged the product is not ready for internal team use yet, as there is no client-facing side for dealers to log in and make changes. The future plan is to integrate the product with existing dealer portals and offer marketing packages powered by AI, such as creating digital banner ads, running SEO audits, and purchasing ad spaces using the system's brand knowledge ([00:20:55](#)).
- **Application to Online Course Development:** Alexandra Chacon proposed that the hub-and-spoke model could be useful in the online course development world, which often struggles with building platforms and managing consistent branding across different modules and videos ([00:22:07](#)) ([00:24:42](#)). They provided the example of their sister-in-law's financial course videos, which require monthly updates and need consistent branding packages across modules for sponsors ([00:23:26](#)). Justin Lobaito confirmed that the platform's system-creation lessons are transferable to this domain,

although the current platform is not immediately ready to do this specific task ([00:25:49](#)).

- **Application to Pitch Deck Creation:** Alexandra Chacon also suggested the platform could streamline the creation of pitch decks for corporate clients, who still often rely on PowerPoint presentations. They suggested using the platform to update pitch decks with all necessary branding, imagery, and treatment automatically ([00:27:12](#)). Nel Santiago and Justin Lobaito noted that this capability largely exists through tools like Claude design, which can generate slide decks from uploaded brand standards ([00:28:23](#)).
- **Opportunity with Crash Champions Client:** Nel Santiago shared a communication with Justin Lobaito regarding a potential opportunity with a client, Crash Champions, which is pursuing AI development, noting a vacancy for an AI expert at their agency ([00:31:07](#)). Nel Santiago highlighted that the client's questions align exactly with what Justin Lobaito's application is built to do ([00:32:29](#)). Nel Santiago cannot fill the role due to existing editing commitments ([00:33:25](#)).
- **Strategy for Pitching the Application:** Alexandra Chacon suggested Nel Santiago leverage their close relationship with Val (who got them hired at the agency) to introduce Justin Lobaito and their application ([00:34:27](#)). Nel Santiago agreed to reach out to Val but advised Justin Lobaito to focus on the creative, less technical aspects of the application during the presentation ([00:35:22](#)). The goal is to set up a compensated opportunity for Justin Lobaito ([00:36:07](#)).
- **Value Proposition and Analytics:** Justin Lobaito stressed that the application creates a centralized source for large companies to manage smaller properties and uses an LLM-type UI to avoid complex backend systems. Alexandra Chacon advised that the most impressive feature for the client will be the system's ability to scrape the internet for new information and provide analytics, which acts as added value by helping the client stay at the forefront of their industry ([00:37:06](#)). Justin Lobaito confirmed that they are working on Phase 10, which involves integrating anonymous visitor identification to gather user information and demographics to inform insightful decisions ([00:39:19](#)).
- **Action Items for Crash Champions Lead:** Nel Santiago messaged Val during the call to schedule a meeting, aiming to get time on their calendar quickly ([00:42:46](#)). Nel Santiago plans to have the initial meeting with Val and Hayden, and they will pull Justin Lobaito in later, suggesting Friday as the best day for Justin Lobaito to meet ([00:50:21](#)).
- **Update on Clappy and Backup Bison:** Nel Santiago updated the group that both Backup Bison and Clappy are waiting on them to review data and look at output results, following a "very nasty" pipeline breakdown with Clappy. They noted they need to load a package from Cindy into Claude design and look at the results ([00:44:40](#)).

- **Setting Up the Company and Banking:** Nel Santiago confirmed they are stuck on company setup until a bank account is established, which is required to set up payment services like Lemon Squeezy and the LLC. Alexandra Chacon and Nel Santiago scheduled a call for Thursday at the same time to finalize the banking situation ([00:45:34](#)) ([00:47:25](#)). Justin Lobaito confirmed they will be inaccessible Wednesday and Thursday but available via text for communication ([00:46:31](#)).
- **Website and Product Launch Plans:** Nel Santiago mentioned that the website for Backup Bison needs updated copy. Justin Lobaito is creating design systems and branding for Backup Bison and aims to get the product out the door next week ([00:48:16](#)). Alexandra Chacon suggested that they will soon need to expand beyond Vimeo for product platforms, which Nel Santiago believes will be easy to implement ([00:49:14](#)).

Touchbase - Transcript

00:00:00

Nel Santiago: was sick for like three or four days and then all the Lincoln Project stuff hit on

Alexandra Chacon: Oh,

Nel Santiago: those three or four days and it was very very hard

Alexandra Chacon: good times.

Nel Santiago: to get through.

Alexandra Chacon: It's not antivirus though, right?

Nel Santiago: No,

Alexandra Chacon: Okay,

Nel Santiago: it's uh it's spread to thin depression and all the other stuff I guess

Alexandra Chacon: good. Oh, good.

Nel Santiago: is

Alexandra Chacon: The usual. Good.

Nel Santiago: y'all.

Alexandra Chacon: just wanting to drive to Miami and punch David in the throat, but other than that doing,

Nel Santiago: Oh,

Alexandra Chacon: you know,

Nel Santiago: really?

Alexandra Chacon: as per usual, but other than that, all good. I'm getting ready for my trip to Vegas and it's just been I don't know. I texted you guys about it. It's educating and holding hands and whatever and the usual on my end. How about you guys? Justin, how you doing?

Justin Lobaito: Can't complain. Just busier than all hell.

Alexandra Chacon: Oh, we can complain

00:01:02

Justin Lobaito: I mean, mine's It's nothing that's bad.

Alexandra Chacon: just

Justin Lobaito: It's just busy. Seems like something's every night. And then I I let myself get to before the move. So, we moved probably like three weeks ago. Before that, I took on like three large projects that then just kind of got put on hold for like three weeks during this move and everything. So, I'm scrambling to get those wrapped up to focus on kind of the more product

type work.

Nel Santiago: That's the hardest thing is like day job kids and then still trying to do freelance on the side. There's never enough

Justin Lobaito: Yeah. Yeah. Well,

Alexandra Chacon: Nope.

Nel Santiago: time.

Justin Lobaito: thankfully AI is making the day job easier, so I can't.

Alexandra Chacon: Well, it's true. Now, I talked to Cindy. She said that she loved the backup device and stuff,

Justin Lobaito: Yeah.

Alexandra Chacon: but she had to send you some notes to send it

Nel Santiago: Yeah,

Alexandra Chacon: over.

Nel Santiago: she sent me the notes earlier and I still have them unread because I haven't had a chance to look at them.

00:02:02

Alexandra Chacon: Okay,

Nel Santiago: I think I know what the issue is on that side. We think it's a OS targeting thing,

Alexandra Chacon: cool.

Nel Santiago: but I'll know from the logs, but I just need to I need to download it. So, I'm trying to balance out stuff here because like Trish has really been taking care of the baby while I'm on a computer and it's not really fair to her. So, I'm trying to like build out some days to maybe like just not work in the afternoon, be off at 6,

Alexandra Chacon: Yeah.

Nel Santiago: and just spend time with her and baby or let her rest and watch still the man.

Alexandra Chacon: Yeah.

Nel Santiago: So,

Alexandra Chacon: Yeah. And it sucks getting sick on top of it is like the triple

Nel Santiago: Yeah,

Alexandra Chacon: whammy.

Nel Santiago: it's uh not the greatest feeling when you just got to work like

Alexandra Chacon: Yeah.

Nel Santiago: and the last thing you want to do is

Alexandra Chacon: Yep.

Nel Santiago: work.

Alexandra Chacon: No, I feel you. I'm doing the same thing over here.

00:03:03

Alexandra Chacon: I literally just sent dropped Caesar off at I had to get him there at 4:45 to the airport in Fort Lauderdale this morning. And as I'm driving there, he's like, "You know,

Nel Santiago: Damn.

Alexandra Chacon: you didn't even ask me if I could go do this." I was like, "I'm sorry. I just I assume Oopsies.

Nel Santiago: Whoops.

Alexandra Chacon: I thought you'd be totally fine going to Mexico, looking Mexican, worried about getting back into the country. Oh, yeah. Good times. Anyway, um Justin, I had a couple thoughts with your um with your app, with your stuff,

Justin Lobaito: Yeah.

Alexandra Chacon: and I wanted to maybe ask you about it and run it by you, get your thoughts.

Justin Lobaito: Yeah, and I've done some crazy crazy stuff with it in the last two weeks or so, two, three weeks because and that's kind of why I went silent for a while there. I had an opportunity I thought was an opportunity but then ended up kind of it it still kind of was but opportunity to go meet with one of the manufacturers at like the the level.

00:04:15

Justin Lobaito: So I prepared a bunch of stuff for the application, the whole spoke and hub of manufacturer, distributor down to dealer. Um, got a lot of place, but then the travel is going to be like \$1,500 2,000 for two hours of the guy's time that

Alexandra Chacon: Mhm.

Justin Lobaito: I just decided that I'm I'm rushing something I probably shouldn't rush and who knows if that's even where I want to be. So yeah, but in doing that I've implemented all kinds of cool features.

Alexandra Chacon: Very cool. You want to show and tell before we get into other stuff?

Justin Lobaito: Yeah, sure.

Alexandra Chacon: All right, let's do it.

Justin Lobaito: So, I guess the biggest thing that I've kind of been learning in the this time frame is let me get up and running first. uh shoot is the idea of um creating like project based wikis and creating um an LLM wiki that is contained inside the project that stores all the project knowledge and everything. So that's why I've been kind of rescaffolding everything for the application, but then also taking that on.

00:05:38

Justin Lobaito: That's kind of why I sent you guys a I think a uh a GitHub repo about like the an LLM wiki. Um hold on, let me get this running first. All right, so it's going to look still pretty similar. only biggest thing that is front-facing is I started to incorporate like a client side view. Um I'm starting to lay kind of the the groundworks and foundations for multi-tenant operations of it. So you can have like a distributor view, a manufacturer view uh and then also um have like individualized um client views. But I started actually this when we were first talking this was I was using as proof of concept. Now I've actually got all these sites launched underneath them inside the platform. So no longer using base 44 for these. So the local application is running everything for the websites. I'm doing a so in conjunction with kind of like a a centralized wiki knowledge base I started to delve into routines. So this is running um four different routines at different time intervals.

00:06:59

Justin Lobaito: And what the routines are doing in this case are the first

Alexandra Chacon: No. Are you?

Justin Lobaito: one.

Alexandra Chacon: I'm not seeing

Nel Santiago: Yeah,

Alexandra Chacon: anything.

Nel Santiago: I can see I mean I'm not seeing I mean I see his I thought he was just going talking.

Justin Lobaito: Oh,

Nel Santiago: I'm just seeing his browser.

Justin Lobaito: I'm doing the wrong screen.

Alexandra Chacon: Yeah.

Justin Lobaito: Oops.

Nel Santiago: Thanks. I thought you were just doing setup. So it was I

Justin Lobaito: Well,

Nel Santiago: Yeah.

Alexandra Chacon: I was like I am not following Okay,

Justin Lobaito: okay.

Alexandra Chacon: there we

Justin Lobaito: So, kind of the biggest thing that I started to work with is that um the LLM wiki installed on each project. I have one running kind of at my centralized like Mac level as well too

that is ingesting all of my meeting notes, all my information. Uh that one kind of runs under team. And so I'm able to query that against like, hey, who do I need to follow up on?

00:07:51

Justin Lobaito: Where should I focus my time and priority for today? Here's my conversations I've have with people. Let's formulate plans from there. So that's kind of at the overall like cloud OS level right here is what I've been is what it's been called. Um, so I'm able to just create a centralized source for like everything I've got going on, but then I carried that concept down into the actual individual site level as well too. So in the case of the application um I have things structured as like there's hubs and then there's sites and the hub is like the centralized source for what the site should read from. The idea is that a hub can be resold to another distributor or another manufacturer and you ingest the hub with all of the brand knowledge and brand information. So this thing this is kind of like a massive repository of all the information that um I've been collecting and understanding all the sites that I make also feedback up into it. So if I have conversations with a dealer that requires me to like pivot from what the overall things are, it it logs that decision back up into the hub so that every every site every dealer after that kind of also gets that context and that knowledge to either allow for pivot, not allow for pivot, things like that.

00:09:15

Justin Lobaito: But the coolest thing that I've done lately

Alexandra Chacon: Wait, before you get into that,

Justin Lobaito: is Yep.

Alexandra Chacon: can I just clarify one thing? What what if um like three4s of the dealers that you're dealing with want to accept this change or this new promotion or something that's going on, but then there's a smaller group that can't. Do they does a smaller group that can't have the opportunity to like not update

Justin Lobaito: Yep.

Alexandra Chacon: further?

Justin Lobaito: Correct. And that's kind of what I'm working on, right? So, yes, that is the idea is that so like the let's say in my own specific small microcosm of examples here, the biggest thing that we rolled out was a drone page for each of the actual Revolution drones. So, this is something that got populated across all of the sites that are on the platform, which right now it's it's six. I've got two more that are onboarding. Uh, of all just um, you know, canonical information about the drones. One pivot that I just launched with this site is that they also support a competitive drone.

00:10:25

Justin Lobaito: So, I got verification from from the my client. Hey, is are you know they're your dealer, but are they okay to, you know, put competitive drones on? They said that's totally fine. So now canonical knowledge got saved into the system about um this image is broken locally about like the DJI Agaras T100 and now what now when I know that you know I'm in my onboarding process I have you know which drones you offer and I I can now um can now populate that with competitive drones and now all that information gets saved into it. So it all kind of happens at the onboarding stage like let's just say drones in this example they tell drones they offer on the in their onboarding intake and I can then populate from the canonical information that I have about those drones. I can also go scrape the web for information about that and populates on a per site basis. So, if Pyro Egg here, if they want um if they want the DJI T1000 or T100, then I now have canonical information to pull from for that to instantly populate that site that for this against their own design choices that they've made.

00:11:43

Alexandra Chacon: Got it. Okay.

Justin Lobaito: And when it comes to kind of larger features where I'm taking this next and I've started to work up kind of a a whole massive uh road map and everything for it, I started to call this thing brand OS. So like brand operating system that the idea with it is that it's a channel platform for manufacturers, distributors and dealers inventory ideas and what the platform needs to um needs to become. So this is the road map for it. Kind of gives the current state and it talks through where I want to be taking things. So yeah, it's a large iterative idea here,

Alexandra Chacon: Yeah.

Justin Lobaito: but creating an entire centralized, you know, quote unquote operating system for for the mid-tier brands. So nothing like John Deere or higher than that, but like mid-tier manufacturers, distributors that really need to that do have kind of a a spoken hub model and disseminate information across their entire their entire

Alexandra Chacon: Now, right now,

Justin Lobaito: ecosystem.

Alexandra Chacon: this is something that you're using to develop for them.

00:12:53

Alexandra Chacon: Is this built in a way that you can basically spin this off and hand it over to somebody in their like basically sell it to I don't know ex person that would basically be like your counterpart within their company. I know.

Justin Lobaito: or they're or they're working with me directly to create the instance for them

Alexandra Chacon: Got it. So you're you stay in the

Justin Lobaito: or or working with you know working with product owners.

Alexandra Chacon: middle.

Justin Lobaito: Yes. Yes. Still in the middle.

Alexandra Chacon: Okay. Because I'm just trying to think of a way that you can like spin this off and and maybe step out of the middle and sell it to like for example to go to a bigger company. They have a whole department that deals with you know their web development, web design. Is this built in a way that you could or could you fit it in a way where you could

Justin Lobaito: Yep.

Alexandra Chacon: say, "Look, buy me out. Give me x amount of dollars. I will develop this hub for you.

00:13:57

Alexandra Chacon: I will put everything together and then hand it over it. Hand it over to you and you do with it what you will.

Justin Lobaito: So I think right now I think that's a possibility right now. The vision that I have with it is it turning into um software as a service. So the if you take like you know three two years from now a year from now whatever and this is built out I've got multiple manufacturers or distributors running inside of it they would have kind of like a dedicated account person to it that is taking and and this is what I started to realize is this is the value that I have in today's world is my ability to run meetings and really disseminate and get information out of clients to get to the root of what it is. And that's kind of the stuff that I'm feeding back into the system. So yeah, that that's that's one kind of like roadblock is a lot of that depends upon me, right? And so right now it could be an automated system because that's what I kind of have running in the background with routines is that uh daily I'm running out I'm hitting a I'm hitting an API to get kind of like latest design trends and pulling that into pulling that into the the hub for Terraplex and deciding which designs for components make sense amongst the five different creative themes that I have.

00:15:29

Justin Lobaito: So there's like a dealer can choose like, oh, do I want patriotic? Do I want tactical? Do I want, you know, uh, agricultural? Kind of like overarching design themes.

Alexandra Chacon: Yeah.

Justin Lobaito: And so this is constantly learning through a daily pro through a daily schedule

Alexandra Chacon: Yeah.

Justin Lobaito: of pulling down finding gaps in the in the design system to fill in for the different themes. It's also doing a daily ingest of a drone news. It's scraping Reddit. It's scraping other publications and pulling out what it determines kind of like is stuff that is relevant to the platform. And then it's also doing kindly deep dive into here's things that are in the entire industry. And then after that there's a cord one, which I haven't tested what that is. That's supposed to do like a general um uh kind of like executive summary of things that should be shifting as far as the manufacturer distributor should go. Like here's some things you should be considering. Here's some opportunities.

00:16:32

Justin Lobaito: Here's some weaknesses that you currently have.

Alexandra Chacon: Here's what we learned and here's what we can adjust.

Justin Lobaito: So this type of stuff was that correct?

Alexandra Chacon: Here's what we learned and here's how we can adjust to the market.

Justin Lobaito: Yes. Yeah. So, right. So, all this stuff is feeding into it. It's it's kind of like learning and growing. It's getting better with designs. It's getting better about uh yeah, just getting better about a lot of stuff. So, on the actual UI side of things, while I haven't really changed much other than just like quality of life things, um the underlying system is infinitely more uh impressive than it was kind of even just three weeks ago.

Nel Santiago: So, are you still looking to like be on the hook? I guess that's what Alex is asking about.

Justin Lobaito: Yep. Yep.

Alexandra Chacon: Because here's here's my my here's what I'm seeing and I'm this is me playing devil's

Justin Lobaito: I

Alexandra Chacon: advocate. Here's the only problem with this model that you've built is that it right for right now it solely depends on how much work you can handle at

00:17:40

Justin Lobaito: Yep.

Alexandra Chacon: any given time. Right. So,

Justin Lobaito: Yep.

Alexandra Chacon: if if you've already got like let's say this takes off and and and you've got six, seven clients that you're working with steadily, then you don't have any further need for anybody else because you're paying all your bills and you couldn't actually take on anybody else because you don't have the time between your personal life, your family, and working. you're not going to have the time to manage a hundred different clients that may also benefit like those mid-tier clients that may also benefit from this.

Justin Lobaito: correct. Yep.

Alexandra Chacon: So that's that's the only like that's why I'm wondering like could this be something that you

Justin Lobaito: Yep.

Alexandra Chacon: could spin off into a like here's the do-it-yourself model, right? Because you may end up with a client that's a bigger client that's like, "Yeah, this is great. How do I utilize this within my company? Can I just buy this from you and hand it over to my guys and and use it within my company?"

00:18:38

Alexandra Chacon: Because right now, you're you're not selling your app. You're selling yourself because essentially this makes you personally more

Justin Lobaito: Yep.

Alexandra Chacon: valuable because it can do all of this awesome stuff for you.

Justin Lobaito: Yep.

Alexandra Chacon: So,

Justin Lobaito: Yep.

Alexandra Chacon: do you leverage that for you to be able to make more money off of this idea that's currently helping you and spin it off into something that you could sell it to bigger companies? That's about like the political thing last time is is kind of a good

Justin Lobaito: I think yeah I think

Alexandra Chacon: angle,

Justin Lobaito: that is an an evolution of it to get to the higher tier where like companies that have their own marketing team and Yes.

Alexandra Chacon: right?

Justin Lobaito: Yes. and that all I'm selling is the software you populate with all your information and all of your knowledge, all your understanding. You set up the routines that are

make sense for you. Yes, I think that is an evolution of it to get to that higher tier clients. I kind of have a stretch goal of uh in in two months in a month and a half time frame getting 10 dealers on it and then in a year's time frame getting two to three hubs on it.

00:19:49

Justin Lobaito: So a hub would be like a distributor or a manufacturer.

Alexandra Chacon: Okay.

Justin Lobaito: So to to to kind of stress test like all right a I need kind of like

Alexandra Chacon: Yeah.

Justin Lobaito: feedback and more information about tools that are useful for it right like so so I can continue to build a road

Alexandra Chacon: Yep.

Justin Lobaito: map continue to build which is why I was really focusing on getting down to North Carolina for the meeting because now I can actually have some now I can actually have a a working example of the entire chain and not just like distributor to dealer. I can have manufacturer to distributor to dealer to dealer and the idea is that if I get a manufacturer manufacturer to have multiple distributors, I can really see how this propagates across an entire ecosystem. So packaging this up to just kind of like allow internal teams of of of companies to to explore with I think there there's an evolution of it in there. Yes.

Alexandra Chacon: Yeah, we're just a ways off from it because I think right now it's too it would be too premature to do exactly that because they'll just rip it.

00:20:55

Justin Lobaito: Yeah,

Alexandra Chacon: They'll just

Justin Lobaito: exactly. This doesn't and there's no there's no client facing side of this yet. Like the dealers can't log into their website and make changes. I'm starting and kind of like my my my next iterations of it is like for Teraplex they have a dealer portal which is dealers log into they have digital asset management inside of it. have um all these other things. But then to start to create like well the hub this product should be containing the dealer portal and then from there dealers can purchase marketing packages like have AI using all this knowledge and all this like the system knows for Black Knight drones what their contact information is, what their logo is, all that stuff. Well, if I have approved Terraplex assets and resources that the system also ha also has knowledge of, I can use AI to create marketing materials for them like um digital banner ads and even doing things like automatically working into like a um into a um ad platform to purchase the ad spaces for them or do SEO um audits for them directly.

00:22:07

Justin Lobaito: So, the idea is that taking this a bit further now after this as opposed to just websites and creating kind of all-encompassing packages for the brands to market to their dealers that then I'm taking a cut

Alexandra Chacon: Got it.

Justin Lobaito: off.

Alexandra Chacon: Um, so I was just had two I had a couple conversations on one aspect of where I feel like this could kind of be useful. Um, I had a couple of different people approach me about because I come from the video world,

Justin Lobaito: Yep.

Alexandra Chacon: right? Like making marketing videos and there's three different contacts of mine that are all going and they're at different levels of this, but they're all going down the road of these like creating online courses.

Justin Lobaito: Yep.

Alexandra Chacon: So Nell, you worked on one of them. That was my sister-in-law. But there's now two other people have kind of approached me about, you know, experience in in producing videos for stuff like that. And what I've noticed in that world is that they're all very um it's like difficult to build out that platform to be able to do those online video like the and I'm talking about like course videos kind of like like think like masterclass.

00:23:26

Alexandra Chacon: Do you know?

Justin Lobaito: Yep.

Alexandra Chacon: Yeah. So, so I have my sister-in-law is doing a a financial their courses, right, for people who are like layman, right? to be able to understand their credit, how to build their credit, how to work with banks and banking systems, and like what do like right down to granular stuff like what day of the month should you try to have your bills paid on so that it reflects positively on your credit card statement, stuff like that, right?

Justin Lobaito: Yep.

Alexandra Chacon: And what she's doing is interviewing industry giants like Vantage Score and FICO score and you know like people that are like the senior vice president blah blah blah. So she's doing these videos that require you know monthly

Justin Lobaito: Yep.

Alexandra Chacon: updates. um they all have a branding package, right? And they all she is using those to then pull in sponsorship from banks and credit agencies and such and such that

they then have their branding that needs to be associated with it. So all of that needs to go out to all of the the videos and and whatnot that people have been kind of signing into on their end.

00:24:42

Alexandra Chacon: Does that make sense? Do you follow what I'm saying?

Justin Lobaito: Yep.

Alexandra Chacon: Okay.

Justin Lobaito: Yep.

Alexandra Chacon: So something like this could be useful in that type of environment. And I'm wondering what the the capability is to be able to spin off like would this operate the same way as this hub and spoke type feature that you've been working on where it's like okay you have the main hub of all of this the the branding of the company and whatnot and you've got the different videos and then you just enter in all the information and it spins it out to the different categories of of videos that she's created. You know what I'm saying? Because she has like the credit module and the home buying module and the this module that and

Justin Lobaito: Yeah.

Alexandra Chacon: it's like keeping it all under that one branding umbrella. When one thing changes, she has to change it across the board and getting that done. you know, she's dealing with guys over in India that are retrofitting their stuff that's, you know, broken half the time and and it kind of turns out to be a nightmare.

00:25:49

Alexandra Chacon: So unless you're like masterclass and you have a ton of money,

Justin Lobaito: Yep.

Alexandra Chacon: you're kind of stuck because there's no in

Justin Lobaito: There's pro there is certainly um there's

Alexandra Chacon: between.

Justin Lobaito: certainly things I've learned in this process that are carryover and things I've learned in creating

Alexandra Chacon: Mhm.

Justin Lobaito: now just systems as opposed to like websites creating systems um that are applicable

Alexandra Chacon: Mhm.

Justin Lobaito: to that this this platform in its state. No, it's not it's not going to do that. But man, it's pretty close to being able to create systems like that.

Alexandra Chacon: Yeah.

Justin Lobaito: Yeah. And like like nowadays like like me even spinning up like an admin UI is super simple.

Alexandra Chacon: Okay.

Justin Lobaito: So yes, that is that is possible. And it's it's kind of a crossover between what I'm doing with this and kind of what I'm doing with this other project where it's the it's a publication and she needs to, you know, get 25 years of PDF backlog digitized and everything where I'm using I created a back-end system for her that scrapes her PDFs, outputs it, but whenever she makes changes, it's administrable across the entire

00:27:12

Alexandra Chacon: Got it. Got it. And then the other one that I was thinking of that I talked to Nell about,

Justin Lobaito: thing.

Alexandra Chacon: I just sidebarred with him the other day was um building pitch decks. um company like uh you know when I work with advertising agencies which I'm sure you're familiar with I know Nell is overly familiar with you have pitch decks that you have to come up with

Justin Lobaito: Yep.

Alexandra Chacon: and sometimes we send those out to the client but in it still amazes me that corporate clients like Fortune 500 companies are still sending their pitch decks out on a PowerPoint presentation where they could have something like this where it's like, "All right, we've got our our company website, but we can just update and it's not even like their their company website. It's this this site where you could just update here's the new pitch deck and it automatically has all of your branding. It has all of your, you know, the the other company's branding that gets put into it, the imagery, the ideas, the treatment, the all of that stuff can kind of go into it.

00:28:23

Alexandra Chacon: Is that what

Nel Santiago: kind of does that already.

Justin Lobaito: Yeah, that's exactly what I'm I'm bringing up right now.

Nel Santiago: There

Alexandra Chacon: you does that

Justin Lobaito: Claude Claude design is kind of cornering that

Nel Santiago: you

Alexandra Chacon: already?

Justin Lobaito: um that whole thing. And what I've started to do is I've started to put like

backup ice in into claw design so that we can start to create like a general source of like branding knowledge and information so that we can create things like PDFs or whatever. But the cloud design um let me just see what it even does here. If I start with context design system I got to publish it first. So that type of thing already exists. Now, here is where the where the interesting thing happens is all this s*** like already exists in some way or another. Where it comes into play is is nobody's kind of like packaging up for agencies or for like I'm listening to my own agency talk about stuff and they're so far behind and like I don't want to like I just want to shake them because it's like I I'm doing so so many cool things here but I'm not I'm never going to tell you about it because I want to eventually sell it to you someday.

00:29:31

Alexandra Chacon: Yeah. Yeah.

Justin Lobaito: Um it it kind of comes into this um stuff like this already exists. Claude design is doing that phenomenally well right now. Doing slide decks off of what your current brand is. You you you upload like here's my uh here's my um brand standards. Upload it into here. It'll create an entire like digital version of your brand standard so that then you can create assets off of those that centralized source of brand standards including things like pitch decks.

Alexandra Chacon: Well, lovely. I was on that last

Justin Lobaito: Let me just publish this here and I'll see

Alexandra Chacon: week.

Justin Lobaito: um everything looks good. So yeah. So I that's where I think so the idea of like building systems and using AI to power the systems at the end of the day and that's where you know there there is a um there is a opportunity on creating streamlined products that do something very well like backup ice and clappy but then there's also a space here for like creating software for some these larger companies to do things and if there's a way to package that up so that

00:31:07

Alexandra Chacon: Mhm.

Justin Lobaito: it's resellable for every other next model down the road then I think that's that's something worth I I think that's something worth exploring.

Alexandra Chacon: I agree. I

Nel Santiago: Um, can I share my screen real

Justin Lobaito: Yep.

Alexandra Chacon: agree.

Nel Santiago: quick? Can you see that? Okay, so I had talked to Justin about this earlier.

Justin Lobaito: Yep.

Nel Santiago: Uh,

Alexandra Chacon: Yes.

Nel Santiago: read through that real quick. We have a client called Crash Champions. Um, they bought Service King and a shitload of other car repair places. They're going down the AI route trying to develop some stuff. And I feel like what you're doing with your application could be pivoted towards this, but obviously it's not anything I can jump in on, but we have a huge gap at work. Okay? There ain't nobody other than me that really knows anything. That's why they hit me up with this. This is very uh easy pickings to jump in and like be the AI expert for this

00:32:29

Justin Lobaito: just even write even reading the first the

Nel Santiago: s***.

Justin Lobaito: first question from Hayden is exactly what in a way what I'm

Alexandra Chacon: Yeah.

Justin Lobaito: building

Nel Santiago: I know that. This is why I wanted to show you this right now.

Justin Lobaito: Yeah.

Nel Santiago: Um yeah. So I don't know,

Justin Lobaito: So,

Nel Santiago: but I feel like somebody should take this

Justin Lobaito: so this is exactly like the opportunities that like I'm looking for for the application is was who is the

Nel Santiago: Crash Champions is the client.

Justin Lobaito: client?

Nel Santiago: They're like basically the biggest f***** like automotive repair company out there.

Justin Lobaito: Yep.

Nel Santiago: Like I don't think there's anybody bigger than them right now. Um, and we've had them for a while. I actually know one of their creative directors. Like personally,

Justin Lobaito: Yeah.

Nel Santiago: I've known him for years. Just the same thing. Val is a girl that brought me here. I've known her for years. So, like we've all like been friends.

00:33:25

Nel Santiago: Um but um like we don't have that service. They want to get into that. I can't play

that role because they've already told me they want me editing, which I understand, but I don't I just see this vacancy that needs to be plugged in and it shouldn't be plugged in by some third party that we don't

Justin Lobaito: Yep.

Nel Santiago: know.

Justin Lobaito: Yep.

Nel Santiago: But I like I just see what you just showed right now is it's like that's so easy to pivot to this

Justin Lobaito: Yeah. And that's the whole point of it is is a hub and spoke like centralized source and

Nel Santiago: s***.

Justin Lobaito: then just spit out spit out everything else that that it's sped

Nel Santiago: So does anybody know how to make this happen so it like will benefit

Justin Lobaito: from.

Nel Santiago: us?

Alexandra Chacon: I would say this is a a direct conversation that do you have are you friendly with Aiden Hoy and Val? No.

Nel Santiago: Val is a very very close friend and she's who got me hired at this agency.

00:34:27

Nel Santiago: Um I just remember I work here conflict of interest so I would have

Alexandra Chacon: Yeah.

Nel Santiago: to hand off to like

Alexandra Chacon: Yeah.

Nel Santiago: Justin

Alexandra Chacon: I would say this a direct conversation, an introduction between Justin and Val maybe and and

Justin Lobaito: I I I would say it's pro be be be I would say it's probably with the person who you're close with first to kind of to kind of uh you know smoke test

Alexandra Chacon: Yeah.

Nel Santiago: Val.

Justin Lobaito: it.

Nel Santiago: It's Val.

Justin Lobaito: Well, yeah.

Nel Santiago: They love her at this company. Anything she brings to the table, they're going to f*****

Alexandra Chacon: Yeah,

Nel Santiago: listen to her.

Alexandra Chacon: I think Nell, if the best way to make it happen,

Justin Lobaito: Yeah.

Alexandra Chacon: because you're the one that has the tie, I would just reach out to Val directly and say, "Look, I have this partner of mine that I've sourced for other stuff previously. He's fantastic. you know,

Justin Lobaito: Heat.

Alexandra Chacon: build him up and then say, "I want to I want to put you two in direct contact so I can step out of the middle because I need to be,

00:35:22

Nel Santiago: Yeah.

Alexandra Chacon: you know, focusing on my stuff and but this is his realm. This is his world. He can absolutely help you

Nel Santiago: I think the the only thing that I would say is that Justin,

Alexandra Chacon: out.

Nel Santiago: you got to kind of show the creative part of it more because she'll get lost in like trying to, you know,

Justin Lobaito: Yes.

Nel Santiago: understand any of the technical stuff.

Justin Lobaito: Yep.

Nel Santiago: So that's that's the only thing I would tell you. Like she she trusts me. She trusts anybody I recommend.

Alexandra Chacon: Yeah. And if you're comfortable now,

Justin Lobaito: Yep.

Nel Santiago: Yeah,

Alexandra Chacon: just yeah,

Nel Santiago: I can do

Alexandra Chacon: do that and and maybe sit in on the call and just tell her.

Nel Santiago: that.

Alexandra Chacon: You're you'll gladly sit in on the first call, but really, you know, just tell her Justin is the the pro at this. I'm I'm a baby. You know, make yourself Yeah,

Nel Santiago: Yep. Yep.

00:36:07

Alexandra Chacon: I'm a baby when it comes to this stuff. So,

Nel Santiago: Yep.

Alexandra Chacon: really refer all your questions to him and and you know, he can help you. But this is his business. So he's, you know, at the end of the day, it would be a it would be a you probably end up wanting to hire him,

Nel Santiago: Yeah,

Alexandra Chacon: you know,

Nel Santiago: let me I'll ping her after we get off this call and then you

Alexandra Chacon: that is they're going to just talk to him and pick his brain and then not compensate him in any way,

Nel Santiago: know

Alexandra Chacon: you know.

Nel Santiago: Yeah.

Alexandra Chacon: So yeah, that's what I would do.

Nel Santiago: Okay.

Justin Lobaito: Yeah.

Nel Santiago: Yeah. That's funny that I saw this come across. I'm like, "Okay, yeah,

Alexandra Chacon: Yeah,

Nel Santiago: we got to talk about

Alexandra Chacon: funny you should ask,

Justin Lobaito: Yeah.

Nel Santiago: this.

Justin Lobaito: This is this is exactly what I'm trying to build

Alexandra Chacon: Val.

Justin Lobaito: is a large company be able to manage smaller properties of whether it's dealers or locations or whatever, right?

00:37:06

Nel Santiago: I

Justin Lobaito: And then creating a nice UI for it so it's not some stupid like I enterprise level content management systems are god awful.

Nel Santiago: mean,

Justin Lobaito: I've been inside almost all of them and they're just freaking terrible. and shifting to, you know, like an LLM type UI where you're not just you're no longer like sifting through a very stupid complex backend system. You're just interfacing with something that is just doing what you need to do while also while also sticking to your brand standards and

Alexandra Chacon: I'll be with you, Justin.

Justin Lobaito: everything.

Alexandra Chacon: I'll be honest with you. The stuff that when you talk to Val, the stuff that's most important that she's going to be interested in is going to be the aspect of this that

scrapes the internet for new information because the other stuff is fantastic and it allows you to be a lot

Justin Lobaito: Yep.

Alexandra Chacon: quicker at your job. I would imagine it allows you to like really just get through stuff the the you

Justin Lobaito: Yep.

Alexandra Chacon: know the nitty-gritty stuff with ease.

00:38:10

Alexandra Chacon: But as somebody that would hire you, they're they're going to be thinking about one thing is like, well, if I'm going to pay him, what do I care if it's easy for him to do it or not? Right? Really, what I care about is that he can because it's easy,

Justin Lobaito: Yep.

Alexandra Chacon: he can make adjustments quickly, right? And because it's easier for him, I can also now have all of this added value, right?

Justin Lobaito: Yeah.

Alexandra Chacon: like all of the bigger companies in particular, the one thing that when I'm talking to them on my end that they're most impressed with is when you can give them any kind of analytics. And in a way is a form of analytics. It's like I'm, you know,

Justin Lobaito: Yep.

Alexandra Chacon: I'm scraping the the atmosphere, right, for for information for you guys. And that's just added value because this isn't, you know, that part of it doesn't have anything to do with website creation or platform creation. It's very it's all about like this is not only how you build out your your website and and build out your brand, but it also is helping keeping you at the forefront of your industry.

00:39:19

Alexandra Chacon: So, you're not going to be behind the eightball when you know uh stepping out and with something new or a new

Justin Lobaito: Yep.

Alexandra Chacon: product. You're already going to know what people are already planning to do

Justin Lobaito: Yep.

Alexandra Chacon: next.

Justin Lobaito: And I sat in with and this kind of like again just another like larger iteration of something I have on the back on the back burner here is I sat in on a visitor ID I think is what

it's called. Was it this? So something along the lines of it wasn't it wasn't visitor ID but something along the lines of create now if I'm going to start offering things like marketing packages to the lower rungs of the of the of the ecosystem you how can I give them actual tangible information about who they should be marketing towards and starting to fold in something about like actual anonymous visitor ver or visitor identification to feed into not just the dealer level but then also the entire like supply chain of it. So if all if I have uh 10 dealers who opted in to anonymous visitor ver uh identification, I can then feed that information all the way back up to the back up to the central brand to gather more thoughtful insightful decisions for each quarter that they're going to be on the platform.

00:40:46

Justin Lobaito: So yeah, this is kind of like the phase 10 of it is now starting to use like some of these services to to gather like user information about it. So, it's not just stopping at people who submit a form, but actual getting um metrics on um people that are browsing the sites.

Alexandra Chacon: Yep.

Justin Lobaito: So,

Alexandra Chacon: Yeah. That's the stuff that's like that's the secret sauce that they're all trying to get into.

Justin Lobaito: yep,

Alexandra Chacon: They all want to know how many people are visiting,

Justin Lobaito: exactly.

Alexandra Chacon: where they're visiting from, and how can they make money off of each of those people.

Justin Lobaito: Yep. What's What's their demographics?

Alexandra Chacon: Yep. Exactly.

Nel Santiago: My recommendation for chatting with Val and especially because they're going to want to put you in front of Jonathan who's our owner is use what you've built it for as an example but always keep reminding them that you know agriculture can be replaced by automotive. it be replaced by this. Like they they want to see like their understanding of it is going to be how it can be pivoted to

00:41:46

Justin Lobaito: Yep.

Nel Santiago: all different sorts of clients. Um because that's where they're going to like f*****

Justin Lobaito: Yep.

Nel Santiago: open up their eyes. They don't have this capability. They they're so behind, dude.

Like I'm still in that channel and they were still talking about I am this do this. I'm like how come you're running, dude? You guys are nevering do it.

Justin Lobaito: Yeah.

Alexandra Chacon: Yeah.

Justin Lobaito: And that's exactly where I think we're all at is that everybody is asking the wrong questions for where they should be at in understanding what this technology is doing. If if people are still trying to figure out like the fact that he's now asking like, oh, can we do something like this? As opposed like at at least he's a little bit further along and not asking like, well, how do I make my job quicker and easier? That's the wrong question these days is the ceiling. The ceiling is gone for what we can do.

Alexandra Chacon: Yeah.

Justin Lobaito: So now let's just think of the best way to service clients and build it.

00:42:46

Alexandra Chacon: Yep.

Nel Santiago: I'm going to message Val right now to see if she can put some time on the calendar for me.

Alexandra Chacon: Yeah, it's it's Henry Ford building the assembly line. It can be packaged and put wherever you need it to go.

Justin Lobaito: pretty much.

Alexandra Chacon: It's the same thing. It's, you know, one one company's building cars, one's building computers, you know.

Justin Lobaito: Yep.

Alexandra Chacon: Um, Nell, have you been able to push and Yep.

Nel Santiago: Hold on. Give me one second. Hold on. Sorry. Sorry.

Alexandra Chacon: Yep.

Nel Santiago: Second. Okay, I've already pinged her. I'll see you when she has time. Okay, sorry that was I just didn't Val is very f***** busy. So, if you don't get on her calendar early, you don't get on her calendar for days.

Alexandra Chacon: All all good in the hood. Um, have you made any uh movement forward with

Justin Lobaito: Yep.

Nel Santiago: Um, yeah.

Alexandra Chacon: Clappy?

Nel Santiago: So, right now, Bison and Clappy are waiting on me to review uh data.

00:44:40

Alexandra Chacon: Okay.

Nel Santiago: So, um I had I told Justin I had a very very very nasty ass f***** breakdown in the pipeline with Clappy last the last two weeks and um I was fighting with it to try to get some stuff solved and I think I got it solved. Um I just need to look at the output results. So, um,

Alexandra Chacon: Okay.

Nel Santiago: but it's just going to take me a little bit to to just sit down and find the time. It's not going to be today. I'm thinking tomorrow because I was trying to get out of f***** the LP stuff for this month, which is done right now. And then, um, give Trish at least a day break before I But yeah,

Alexandra Chacon: That's

Nel Santiago: um, both of those are in a good spot.

Alexandra Chacon: fine.

Nel Santiago: I do need to review the um, the package that I asked Cindy for. She gave it to me today. So, I just need to load that package into quad and then have it look to see.

00:45:34

Nel Santiago: Um, uh, aside from that, no movement on my end until we know what's like I can't do the company setup until we have a bank. Like if it's going to be virtual or however we're going to do that. That's basically where I'm hung up on on

Alexandra Chacon: Okay.

Nel Santiago: that.

Alexandra Chacon: All right. Um, let's get together and do the for the bank. You just need to sit with me to do paperwork, right? Okay. All right. I'm around What's today?

Nel Santiago: Yep.

Alexandra Chacon: Tuesday. I'm around um if we can do Thursday.

Nel Santiago: That was going to be the day in my head.

Alexandra Chacon: Yeah, Thursday works for me.

Nel Santiago: Yeah. Um, just let me know and I'll make a window. I I can block it off in the middle of the day and just call him on our doctor call.

Alexandra Chacon: I'd be good this same time that we hit today.

Nel Santiago: Okay.

Alexandra Chacon: I could do that Thursday.

Justin Lobaito: Thursday for what?

00:46:31

Nel Santiago: Okay.

Justin Lobaito: Or is it

Alexandra Chacon: We're just

Justin Lobaito: just

Nel Santiago: To try to set up uh the banking situation because in order for me to um

Alexandra Chacon: going

Nel Santiago: set up lemon or f*** that lemon squeezy,

Alexandra Chacon: lemon squeezy.

Justin Lobaito: Yep.

Nel Santiago: I'm stuck where I have to put in uh banking, so where payments go to.

Justin Lobaito: Yep.

Nel Santiago: And then um I'll also need to finish that up so I can set up the um LLC.

Justin Lobaito: I'm going to be pretty much inaccessible Wednesday and Thursday, but do you need me for that

Nel Santiago: Uh depends on Alex what you found on that end.

Justin Lobaito: stuff?

Nel Santiago: Like he's going to some

Alexandra Chacon: Can you just can you available to answer texts or you're cool?

Nel Santiago: paperwork.

Justin Lobaito: Yes. Unavail answer text. Yes.

Alexandra Chacon: All right. So, if we need anything, then we'll just communicate via text.

Justin Lobaito: Yep. That's perfect. And then

Alexandra Chacon: Old. It's like sending a letter or sending up a smoke signal or something.

00:47:25

Justin Lobaito: If we want to touch base again on Friday, my I work from home again on Friday, so Friday's pretty open for

Alexandra Chacon: Okay, cool. Friday for me is going to get kind of hectic. And Thursday,

Justin Lobaito: me.

Alexandra Chacon: starting Thursday afternoon into Friday, like Yeah, Thursday late afternoon into Friday is going to be a little nutty for me, but then I'm open again on the weekend if you guys have any time on the weekend.

Nel Santiago: I have time

Alexandra Chacon: Okay, cool.

Nel Santiago: Saturday.

Alexandra Chacon: All right. We'll keep that open if if we need to do it. But in the meantime, no,

let's at least get Lemon Squeezy up and running and and bank account up and

Nel Santiago: Yeah.

Justin Lobaito: Oh,

Nel Santiago: Um,

Alexandra Chacon: running.

Nel Santiago: the text that you sent Justin for the website,

Justin Lobaito: Nick.

Nel Santiago: I was going to mention Vimeo just pushed bunch of like quality of life stuff, but the site's still dragging. So, I don't see that as being any different for launching the product,

00:48:16

Justin Lobaito: Okay.

Nel Santiago: but I know that um I know that there's new copy that needs to go up on the site. just questions.

Justin Lobaito: Yep.

Nel Santiago: I mean, or just a reminder, you know, is we'll get to the point where we'll need to get that

Justin Lobaito: Yep. So maybe um yeah,

Nel Santiago: updated.

Justin Lobaito: maybe we if we can regroup again on Yeah. either Friday, Saturday. I think I don't think I'm doing much this weekend. um and and really get to a state where we can get backup icing out the

Alexandra Chacon: Okay.

Justin Lobaito: door like next week and just get get one thing under our belt would be great. But so and what have you need from me? And so like on my end outside of just the company branding we were talking about. I started creating the actual like design systems everything for backup bison. So we start easily creating if we need any additional materials but mostly going to be just make sure the website stays in sync with what we're we're wanting.

00:49:14

Justin Lobaito: Um I don't know if I did that all inside the team cloud account or not. I'll have to check. Um, but if you once we once kind of get all the stuff done for Becca Bison,

Alexandra Chacon: Cool.

Justin Lobaito: I can help out with any brand stuff you might need for Clappy or our website as well

Nel Santiago: Okay. Um, well,

Justin Lobaito: too.

Nel Santiago: that's all going to depend on if anything kicks up with uh your app and my chat with Val. So,

Justin Lobaito: Sure. Yeah.

Nel Santiago: all right. I got to get something to eat. Uh, just send me an invite, a standing invite for Thursday,

Alexandra Chacon: Okay, cool.

Nel Santiago: Alex.

Alexandra Chacon: You can do that. Um, I'll send it to you on Google Meets, right? That's what we have to do. Okay, cool.

Nel Santiago: Yep.

Alexandra Chacon: And I do think with regards to backup bison real quick before we all jump sooner rather than later, we are going to have to open ourselves up to other platforms other than Vimeo because you know there's a very short lifespan there for us if we're only pulling from Vimeo.

00:50:21

Alexandra Chacon: That's just my two cents.

Nel Santiago: I think that'll be easy enough to implement.

Alexandra Chacon: All right.

Justin Lobaito: Yep.

Nel Santiago: We just have to find Oh, she already set some time. Let me see what she Thursday morning.

Alexandra Chacon: And you said

Justin Lobaito: I I can't Wednesday or Thursday.

Alexandra Chacon: you're

Nel Santiago: Well, it's just going to be me, her, and Hayden,

Justin Lobaito: Oh, gotcha.

Nel Santiago: and then I'll I'll go from there. Okay.

Justin Lobaito: Sure.

Nel Santiago: Awesome.

Alexandra Chacon: for reference if you do need to pull him in. Friday is the day to do

Nel Santiago: Okay. I'll let her know.

Justin Lobaito: Or Yeah.

Nel Santiago: She can she can probably make another uh schedule appointment then.

Alexandra Chacon: it.

Justin Lobaito: Fridays, Mondays,

Nel Santiago: So,

Justin Lobaito: and most Thursdays I can usually work as well too. Most Thursdays.

Alexandra Chacon: All right, we will talk again on Thursday. Now, Justin will probably be talking to you over the weekend.

Justin Lobaito: Yep.

Alexandra Chacon: All right, sounds good,

Nel Santiago: See you again.

Alexandra Chacon: guys.

Nel Santiago: Bye.
