Summary

Drone lineup strategy alignment and portal redesign planning with centralized Brand OS ecosystem implementation discussed.

Drone Lineup Strategy Review

The drone product lineup strategy was solidified with upcoming imagery and specification sheet updates. Pricing remains unified across models to incentivize sales during the initial rollout.

Brand OS Portal Vision

The team decided to implement the Brand OS ecosystem to centralize dealer access and website management. This system aims to unify dealer workflows through automation and HubSpot integration.

Portal Features and Governance

Planned functionality includes AI-driven asset categorization and granular user permission structures for secure data access. These features prioritize operational efficiency and sustainable business growth for dealer operations.

Decisions

Needs Further Discussion

- **New dealer portal rollout evaluation** The rollout of the new dealer portal platform and its associated pricing structure requires further evaluation and alignment with stakeholders, specifically John, before final implementation.

Aligned

- **R32 model retention confirmed** The R32 will remain a valid product offering in the drone lineup alongside the newly introduced R40 model.
- **Teraflex website redesign prioritization** The team prioritized a comprehensive redesign and UI refresh of the Teraflex website to improve lead capture and ecosystem consistency.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [Justin Lobaito] Update Homepage Graphic: Update the image on the lower right corner of the homepage to an I19 photo.
- ☐ [Jack Schroeder] Provide Product Materials: Provide the R40 spec sheet and image to Justin by the end of the day.
- ☐ [Jack Schroeder] Send YouTube Videos: Send the YouTube training videos to Justin to incorporate into the portal.
- ☐ [Justin Lobaito] Build Training Section: Incorporate the YouTube training videos into the dealer portal training section.
- ☐ [Justin Lobaito] Create Rollout Plan: Develop a rollout plan for the Teraflex website redesign and new dealer portal features.
- ☐ [Justin Lobaito] Review Website Notes: Review previous meeting notes to identify and address pending website updates within the craft platform.

- ☐ [Justin Lobaito] Demo Brand OS: Schedule and perform a product demonstration for John to introduce the Brand OS platform and its capabilities.
- ☐ [Justin Lobaito] Coordinate Project Meeting: Coordinate a follow up meeting involving Jack, John, and Justin to discuss the project rollout plan and pricing alignment.

Details

- **Meeting Agenda and Homepage Updates:** Justin Lobaito and Jack Schroeder opened the meeting to discuss R40 and R32 drone updates, enhancement plans for the dealer portal, and potential User Interface updates for the Teraflex website. Justin Lobaito committed to updating a graphic on the homepage, specifically replacing an existing image with I19 drone photography, as requested by Jack Schroeder ([00:00:09](#)).
- **Drone Lineup Strategy:** Jack Schroeder confirmed the current drone lineup consists of the I19, R32, and R40 models. Regarding the R40, John has finalized the specification sheet, which awaits final approval from Russell, after which it will be shared with Justin Lobaito alongside R40 imagery. Jack Schroeder explained that the company is currently offering the R40 at the same price point as the R32 to incentivize sales, though pricing structures will eventually be adjusted ([00:02:36](#)).
- **Marketing Materials and Imagery Availability:** Marketing materials for the new drones currently consist of manuals and a specification sheet, with imagery of the R40 expected following Russell's approval. Jack Schroeder noted that existing imagery from GTEx/Russell is restricted by usage rights and often contains foreign flags, necessitating graphic design intervention. The team will capture their own footage and images once the drones arrive in the United States, which is expected later this month ([00:04:21](#)).
- **Teraflex Website Design and Strategy:** Justin Lobaito proposed a redesign of the Teraflex website to better showcase products and facilitate marketing launches. The proposal includes creating dedicated pages for drone models, a comparison page, and implementing lead-generation funnels connected to HubSpot. Jack Schroeder agreed with the need for a website refresh to improve User Interface and lead capture capabilities ([00:07:05](#)).
- **Brand OS Dealer Portal Vision:** Justin Lobaito introduced "Brand OS," a new dealer portal concept designed to function as an ecosystem that connects the Teraflex website, dealer websites, and the dealer portal into a single source of truth. This system would sync daily with HubSpot to manage dealer access automatically, ensuring that

whenever a dealer is added to HubSpot, they gain portal access the following day ([00:10:41](#)) ([00:14:15](#)).

- **Planned Dealer Portal Features:** Justin Lobaito outlined features for the new portal, including a community forum for dealers to share best practices and a "marketing assist" tool for creating co-branded marketing materials. Additionally, the platform will feature a training section for video content, such as YouTube videos created by dealers, which Justin Lobaito can integrate once provided ([00:16:12](#)) ([00:24:56](#)).
- **AI Integration and Data Management:** The new portal will utilize AI to tag and categorize assets automatically upon upload, such as identifying specific drone models in images to improve searchability and meta-tagging. Justin Lobaito emphasized that while AI informs decision-making and content generation, the system maintains a canonical data source that can operate independently if necessary. The system performs daily triage to ensure information remains up-to-date and accurate ([00:19:11](#)) ([00:25:42](#)).
- **Parts Catalog and Order Tracking:** Justin Lobaito showcased an intuitive parts catalog within the new portal, allowing for direct cart additions and order placement. This system is designed to integrate with HubSpot, enabling dealers to track order status, though the specific transactional mapping between the portal and HubSpot is a subject for ongoing configuration ([00:22:21](#)).
- **Permissions and User Management:** Jack Schroeder expressed concern regarding permission levels, particularly regarding sub-dealers or specific employee access to sensitive information like pricing. Justin Lobaito confirmed that the new system will support granular permission structures, allowing administrators to restrict access to specific features, such as distinguishing between brand assets and parts ordering, based on user roles configured within the User Interface or HubSpot ([00:31:31](#)).
- **Pricing Strategy and Business Growth:** Regarding the cost of the new portal system, Justin Lobaito clarified that pricing would be determined as they move through the implementation process. Because Teraflex serves as a proof-of-concept for this ecosystem, the pricing structure aims to be sustainable while allowing for the development of new features based on real-world use cases and feedback from dealers ([00:34:22](#)).
- **Next Steps and Coordination:** Justin Lobaito will conduct a demonstration of Brand OS for John to align on the project strategy. Following the demo, Justin Lobaito, Jack Schroeder, and John will meet to discuss the project game plan. In the interim, Justin Lobaito will review previous meeting notes to execute immediate updates for the current Teraflex website, including addressing quote request functionality ([00:42:40](#)).
- **Troubleshooting Dealer Lists and Map Coordinates:** Jack Schroeder and Justin Lobaito addressed difficulties with managing dealer access and map placement on the current

portal. Justin Lobaito clarified that map coordinates are auto-populated based on the address upon saving, so simply deleting coordinates is ineffective. To remove a dealer from the map and portal access, the dealer should be disabled in the system ([00:45:38](#)).

Terraplex - Monthly Status - Transcript

00:00:09

Justin Lobaito: a lot of Hello there.

Jack Schroeder: Good morning.

Justin Lobaito: How are you?

Jack Schroeder: Good. How are you doing?

Justin Lobaito: Well, is there any background music? I'm in a busy coffee shop.

Jack Schroeder: Oh, yeah.

Justin Lobaito: So,

Jack Schroeder: There I see it's different than your normal your

Justin Lobaito: yes. Is there background sound or is it manageable?

Jack Schroeder: normal. No,

Justin Lobaito: Okay, perfect.

Jack Schroeder: that's

Justin Lobaito: All right. So, sounds like So, I had all my dealing meetings on Friday. I was able to meet with three of the six that I'm on right now. Um, all good. Kind of on their end.

Jack Schroeder: Okay.

Justin Lobaito: Um, but I think one of the things that we can address as well too is um, this gets get caught to speed on kind of the R40 and the R32. Um, so that's one thing we can talk about today.

Jack Schroeder: Yep.

Justin Lobaito: Other thing is I want to give you kind of a status update as far as enhancements for the dealer portal that I've been working on and kind of start to showcase some of the capabilities and functionality that I've been just working on in general from a larger perspective.

00:01:54

Justin Lobaito: So, and we can get we can save that for the later half. But, um, yeah, that's kind of what I sort of saw as the agenda items for today. Is there anything specific that you want to make sure we touch base on? I I know there is I do have an outstanding thing on your homepage. There's that graphic in the lower right. Um, so I do need to update that image that's kind of I think it's like over rice patties, but I'll update that to one of like the I19 photos that we

Jack Schroeder: Okay,

Justin Lobaito: have.

Jack Schroeder: perfect. Um, yeah. No, I think why don't I wait and see what you have and then see if any I have any questions after that. I mean, I knew we had talked about a few ideas or some quoting thing, you know, things like or requesting a quote or, you know, something like that,

Justin Lobaito: Yeah.

Jack Schroeder: but let's just wait and see what you've got and then I can go from there.

Justin Lobaito: Yeah.

00:02:36

Jack Schroeder: So,

Justin Lobaito: So, um, first let's kind of just talk through a bit about what's how should I be positioning the a talking about the R32 and the R40, not just on the Teraplex site, but also on the dealer sites. Where where do we kind of stand with um with what's going on, I guess?

Jack Schroeder: Yeah. Um, they're both both models that uh I don't think we've made a company decision if if we're going to

Justin Lobaito: Yep.

Jack Schroeder: get if people will even have an interest in R32s. It'll be interesting to see what the price point lanes out at, but I I don't think we remove the R32. I mean, that's still a legitimate drone with those specs that tank size, but uh now we're we're bringing the R40. John just got a spec sheet done and sent over to me. I think it's waiting for final approval from Russell, but that's something we'll be able to get to you hopefully by end of the day with an image of the R40 as well. So,

Justin Lobaito: What?

00:03:29

Jack Schroeder: that will be something that So, I guess just kind of in the drone lineup, we'd have the I19, the R32, the R40.

Justin Lobaito: Mhm.

Jack Schroeder: Um, and then that'd just be up for, you know, when the customer calls and says, "Hey, I'd like the R32." Well, hey, guess what? You get the R40 right now for the price of the R32. That will be changing, but it nobody's going to turn down that offer of a bigger tank,

Justin Lobaito: Yeah.

Jack Schroeder: you know? So, that's kind of where we're at. But, I don't think we completely need to.

Justin Lobaito: Okay.

Jack Schroeder: It's still It's still a model. It's still a model that we offer or may offer or whatever. Just right now, they're getting that free upgrade.

Justin Lobaito: And so all those fall underneath the revolution product line. Is there any other like down the road is there any um from Russell, are there any other product lines that would be offered to dealers as far as like just overall lineups of different movies of

00:04:21

Jack Schroeder: There will be, but those will be on a launch.

Justin Lobaito: drones?

Jack Schroeder: You know, that those aren't anything that we will put out until they're launched by Revolution, if that makes sense.

Justin Lobaito: Okay.

Jack Schroeder: that that will continue to evolve through the the years um with newer models and other

Justin Lobaito: Okay.

Jack Schroeder: models and sizes and

Justin Lobaito: Okay, perfect. Um, so right now we'll have I have the manuals.

Jack Schroeder: things.

Justin Lobaito: That's all at the UFO. I have the um coming through approval is a spec sheet that John will be looking up. And once you do that, that's that's what we have right now for materials. Is that right? Spec sheet in the manual.

Jack Schroeder: say that we'll be adding that. Is that what you said?

Justin Lobaito: Do we have anything more?

Jack Schroeder: What' you say?

Justin Lobaito: Any more when it comes to like materials? Are we getting imagery from Russell at

Jack Schroeder: Um, so,

Justin Lobaito: all?

Jack Schroeder: so yes and no. We have some images from Russell of that fly and that is GTEx's material.

00:05:16

Jack Schroeder: So, it's it's pretty guarded on how we can use it.

Justin Lobaito: Okay.

Jack Schroeder: I think if you were looking for something and we got it approved by Russell, we could work with John to use some of those images. As soon as we get ours in the United States, we'll be taking our own images,

Justin Lobaito: Okay.

Jack Schroeder: too.

Justin Lobaito: Perfect.

Jack Schroeder: Does that then then we'll have more free rain. But if there was something you were looking for or needed, we don't have any really good still images that wouldn't need graphic designing done to them because they all have like the Brazilian flag on them and such.

Justin Lobaito: Okay.

Jack Schroeder: And so this image that I'm going to be sending to you,

Justin Lobaito: Yep.

Jack Schroeder: I think you'll be able to to utilize if it's approved.

Justin Lobaito: Okay. Perfect.

Jack Schroeder: But other than that,

Justin Lobaito: Yeah.

Jack Schroeder: it's just we're just we're just patiently waiting for them to get here and then we'll have some, you know, start getting some footage to I guess what's that

00:06:01

Justin Lobaito: Okay. Is there Is there a timer? I know when that is.

Jack Schroeder: this month is the Yeah.

Justin Lobaito: Oh, sweet.

Jack Schroeder: Yep.

Justin Lobaito: Exciting.

Jack Schroeder: Yeah. Um, so with that being said, I mean, we do have some R32 footage

Justin Lobaito: So,

Jack Schroeder: that, yeah, it's just so it's so complicated because it of the production shift to the R40s that wasn't expected. So, more images to come, but I think, you know, at least what we send you can be utilized for the time being if that's okay. Okay. And then yeah, we'll get that cell sheet on to the dealer portal and then um hopefully that'll give you information to use

Justin Lobaito: Perfect.

Jack Schroeder: for your Where you at now? Web for the website too.

Justin Lobaito: Yep, that'd be great. when it comes to like is there ever like something on the website the Teraplex site

Jack Schroeder: Oh, we do have a pencil.

Justin Lobaito: where we would want like a um the homepage to now like now introducing the Ruth 40 and then drive to like a an announcement page or a product specific page.

00:07:05

Justin Lobaito: Is there anything that we should think about for the terlex site when we have when you have access to newer drones that almost creating kind of like a marketing push on the website?

Jack Schroeder: Yeah, I I like that. Um,

Justin Lobaito: Okay.

Jack Schroeder: I'm just pulling up our website here. Yeah. So, like would the join the revolution go away or would that just be like the second thing that comes up? Like it would it just be part of that reel or you know that

Justin Lobaito: So, here's here's kind of what my gut feeling is just in general and and talking

Jack Schroeder: is

Justin Lobaito: with dealers um and like how they send potential clients to the Teraflex site is that it's it's probably time to do a gut check with the Teraplex site and see if it's servicing all the needs that we need. So having pages fleshed out and dedicated to each of the drone models, having kind of like a comparison page that at like the SL drones would be here's all the models, dig deeper into them, and giving everything just kind of like a holistic um freshen up with the with the UI.

00:08:22

Justin Lobaito: So we have counter things like if we do have a new model coming up that we want to promote we have a space dedicated on the homepage whether it is like if it is that big old hero in the very beginning we can utilize that that's that one's kind of assuming we have some materials to support behind it whether it's a background video background image so I I kind of want to start to

Jack Schroeder: right?

Justin Lobaito: go through an exercise of rethinking the design of the terlex site and that may Then um that may then create a cadence of like here's when like if we have a new line that we're or a new drone whatever we're be promoting here's what happens on the website it gets a it gets it new page if it's not available yet but we want to tease it like a coming soon identifier. the homepage gets updated with the kind of the the marketing talk to drive to that to get more information or either the user can see all information on the page or we also request information through a contact form which then goes into HubSpot which then creates kind of a I think there's an opportunity now to especially with the update of an Ruth coming out to rethink the UI rethink how we're capturing leads on the Teraplex site to start to create those funnels and things like into HubSpot.

00:09:42

Justin Lobaito: I've done a lot of substantial work with um what I'm kind of calling the V2 of the dealer portal and and your connections with HubSpot to that that we can talk through um in this call and I can kind of showcase a few of those things.

Jack Schroeder: Okay.

Justin Lobaito: But when we start to think through the a new design for the Teraflex site and all this is kind of just baked into what your monthly is right now. Um, I want I want to really start to, you know, do iterative updates to the Teraflex site to make sure that the the dealer sites are doing lots of cool things. I want to make sure the terlex site also gets some of those cool things and features and updates.

Jack Schroeder: Yeah. Yes.

Justin Lobaito: Does that make sense?

Jack Schroeder: Yes. Absolutely.

Justin Lobaito: Okay. Okay. So, with that in mind, um I when I was prepping for this meeting and I there are some things that we talked about in our last

Jack Schroeder: What?

Justin Lobaito: meeting that I that kind of fell off my radar.

00:10:41

Justin Lobaito: So, you already brought up I I brought up the image um you brought up kind of the request a quote. So, there are some things like th those aren't going to be I don't have those to showcase right now, but those are easy updates that I can showcase. What I really wanted to kind of show what I've been excited about is is everything I've been doing kind of in the background with Terraplex with dealer websites and with the dealer portal connection.

Jack Schroeder: Yeah.

Justin Lobaito: I've always envisioned this just entire ecosystem across all all those aspects. So you have the Teraplex, you have the dealer sites, you have the dealer portal. If all those things are always talking to each other and everything is up to date and everything is feeding the other thing, then always at the end always at the end of the day we should always have a

better product at every single little aspect. And we're always creating a we're always creating just more and more knowledge dump that dealers can utilize to start to run their business, but then also Terlex can start to utilize to see things like how are dealers interacting with, you know, things on the dealer corner?

00:11:45

Justin Lobaito: How are how are we feeding knowledge to the dealers in a way that's sustainable for us but also accurate? And when we when I started to formulate this ecosystem with um with the stuff I've been working on already and my my my vision for how I wanted to keep all these things connected is um really leveraging kind of what AI knows and then keeping a centralized data source and a centralized knowledge base. So, ever since we initiated and have been working through project, I've been feeding and training kind of a model on everything that is paraplex and using that to formulate decision. It started off with, you know, the film made decisions upon like how should we be writing copy, positioning content, and finding finding um finding opportunities for what dealers can do on our websites that every every single conversation um that I have with dealers, every single um transcript that gets that gets written from these meetings, every single document that you send me, every single image, all gets dumped into this kind of knowledge pool and it creates a very comprehensive snapshot of um CTX revolution at the top and here's the products paraplex and their kind of

00:13:05

Jack Schroeder: Yeah.

Justin Lobaito: ecosystem and then all the dealers underneath there. It's all this kind of like spoken hub this model every every tier every every tier above it feeds information the tier below it so the tier below it can make better informed decisions and and start to create some really cool features and functionality. So what we started with was your the Teraplex website. Terex website is the craft CNS. It's it's it's it's great. It does lots of robust things, but there's no there's no layer in between that is sending knowledge to your other parts of your ecosystem. After that we have the dealer portal which is a part of the terlex website but that's just static information that requires just kind of like us maintaining that and writing new feature functionality that people get access to. And then over here in the bucket is we have our dealer sites. The dealer

sites are already utilizing that kind of centralized knowledge source and the the knowledge hub is feeding information to the dealers sites to create to create better experiences, better just comprehensive knowledge.

00:14:15

Justin Lobaito: When I do update something inside the knowledge base of like what the pricing should be,

Jack Schroeder: Hey,

Justin Lobaito: all the dealers get updated with that. And that was the that was the foundational idea behind it, right? Is let's make sure the brand information is always maintained and controlled. where now this is going is um kind of the inclusion of the dealer portal into this knowledge base and that's where I'm at right now is how can we rethink the dealer portal to utilize just this very robust central source of information. So what I started with and I'm going to share my screen here real

Jack Schroeder: Great.

Justin Lobaito: quick. What I started with here is kind of the just the MVP of let's just recreate exactly what the current um exactly what the

Jack Schroeder: Um,

Justin Lobaito: current uh dealer portal is but start to showcase some of the way some of the areas which we're taking it. So these are some of the things that you and I have already talked about that would be that would be great to have.

00:15:16

Justin Lobaito: So what this is here is this is a it's going to seem like it's very similar to what the dealer portal is, but the difference between it is that this is now the knowledge source is feeding this dealer portal. So this has direct syncing with your HubSpot list of the dealers. So every day it syncs up with your HubSpot list and it makes sure that the people who have active access to it are active in here. It handles everything and it handles all the syncing back to HubSpot. So at the very bot at the very start, this is already something that is easier to manage just on that feature alone. When you add a new dealer to the HubSpot list, by the following day,

they already have portal access. They they hit whatever the portals whatever the portal URL ends up being.

Jack Schroeder: Swipe to the

Justin Lobaito: They get prompted to enter the to create their password and then they have access to it.

Jack Schroeder: right.

Justin Lobaito: So this has a lot of the things that we've already discussed inside here.

00:16:12

Justin Lobaito: brand assets, parts catalog, my orders, and support. What's coming is, and these are some ideas that I've been that I've been floating around. Two of the very basic ones are community and marketing assist, which is how we create co-branded marketing materials, and community, which is what I heard from the dealer side of things. We would love to ask other dealers how they're accomplishing XYZ. So, think of this as like a a community forum kind of thing. So, if let's say um James over at Truss has been has has already done three trade shows this year and um Josh over at New Heights is prepping for a trade show. The idea is that they can kind of ask questions and share some of that knowledge across there. it. That's the general sense that I've been getting from, you know, my small pool of six dealers that I've been talking about is they would love to know what other dealers are

Jack Schroeder: Yeah,

Justin Lobaito: doing and also find a way to share some of the things that they know they're doing.

00:17:06

Jack Schroeder: perfect.

Justin Lobaito: I've had it on multiple occasions people talking about like if we do well then just all of the dealers do well and if we share that we share that well share that knowledge share that wealth then ter well and we all do much better from that

Jack Schroeder: Yeah.

Justin Lobaito: shared knowledge and then from there you know notifications and everything that

Jack Schroeder: Yeah.

Justin Lobaito: you've been asking for but all managing and configured inside of a much easier layout that is also at the end of the day feeds back into that centralized and text revolution knowledge store. That's a lot up front, but did I am I are you still kind of um tracking at least with what I'm saying on

Jack Schroeder: Yeah.

Justin Lobaito: this?

Jack Schroeder: Yes, absolutely.

Justin Lobaito: One second. I'm not sure different view here. So, I don't come back to this window.

Jack Schroeder: all the information it just looks like a nicer layout or you know easier to use as well you know for them.

Justin Lobaito: Yes. Yep. It's it's much more intuitive.

00:18:07

Jack Schroeder: Yeah.

Justin Lobaito: It's much um much cleaner. But what this allows me to do is that no longer do we have like a very and I'm not saying the Teraflex site is bad. I'm not saying anything that we built inside Teraflex is bad. This is the next iteration of creating that ecosystem for for Teraplex 40

Jack Schroeder: What

Justin Lobaito: dealers and at some point hopefully folding Russell and the G-Tech knowledge into it. So I have kind of these meetings with Russell feed this thing more detailed information feed

Jack Schroeder: are you

Justin Lobaito: it official product specs and upcoming things so that Russell can then make

Jack Schroeder: doing?

Justin Lobaito: decisions and see how things are performing all the way down inside the channel. So, if we just look at some of the things that we have here already. Now, this is a alpha version of it. Um, so I wanted to showcase where you at, where I'm at with this so that you

could start to see my plans of where I'm taking this and we can talk through how do we fold this in, how do we roll this out, what this mean as far as um users and things like that.

00:19:11

Justin Lobaito: So, the very basic here, brand assets, this is just a recreation of what we currently have. I'm reworking this this thing to have filters to have like a preview what the asset is. People can download it instantly. But every asset that gets uploaded through now the dealer portal also gets AI taking a pass at what the asset is. And so it creates a it it saves it to this assets data source of inside mosquito background. Here's what the context of it is. here are where where's places that can be used. So that down the road we can have the ability of let's say we're making a dealer website and now if this is all connected the dealer website can query from here and find inside my I19 category I want to find things that are wind turbines. So everything gets gets AI taking a look at it at upload and providing kind of like some very semantic meta information tied to it. Cool.

Jack Schroeder: Hey, this may be off. So, what happens if an image or a spec sheet or something that's been fed through AI becomes um outdated or edited or tweaked?

00:20:23

Jack Schroeder: Can you instruct it to let go of that initial information?

Justin Lobaito: Yep.

Jack Schroeder: You know what I'm saying?

Justin Lobaito: Yep.

Jack Schroeder: So, it doesn't mislead somebody in the

Justin Lobaito: So, so we actually this the system actually already runs like daily like home triage events and

Jack Schroeder: future.

Justin Lobaito: um it it goes through and all of this and stuff gets gets tracked back to the central knowledge source and the daily triage um makes sure that every information that that it says is canonical and is up to date is actually up to date. So if if it's because we need to reprocess reprocess an image or we need to reupload all the images, we can run commands to

reprocess the I19 images. Make sure that all the meta information is correct. Um and those types of things are like just very specific to what the thing is. It knows it's an I19 because the system knows like what an I19 is. But what is inside the picture? That's just AI taking a grasp at it's a flag.

00:21:21

Justin Lobaito: Um, it's the spraying over alpha alpha wind turbines. Those are just going to be some quick mention tied to it. But we do always do have the ability to triage the hub and so to speak to make sure information is always up to date. When I upload, what's really cool about it is like when I upload the R40 manual into this, it grabs the specs that we that we need and it starts to create the central data source for that. But it also started to give me some things that like I may not necessarily be aware of like here's a way we can position this. It's starting to learn a little bit about like I've been training this I think ever since November and so it knows a lot about Turlex. It knows a lot about real drones. It knows a lot about um James over at um James and uh Anna thank you over at Trust.

Jack Schroeder: Thomas.

Justin Lobaito: It knows a lot about um Josh at New Lance Egg. it knows that um Kelsey um with Pyro

00:22:21

Jack Schroeder: Yeah.

Justin Lobaito: Egg uh her and her husband are preparing for a um are preparing for a trade show um in the fall. So everything just kind of starts to feed all these informed decisions. As we get more and more dealers utilizing this, we get more information tied to it, but then we can create better informed um functionality and features that is all connected back to the central source of information. Parts catalog becomes a bit more intuitive. I mean, this is there's still more features I'm adding to this,

Jack Schroeder: Perfect.

Justin Lobaito: but we can now just easily add to cart right through here. Our cart dynamically gets updated. They can place the order from here, but then the orders also get trapped from

here. We can I know we wanted this to be very transactional with HubSpots or by by not including HubSpot and what this process is, but we can start to map these to deals that then the dealer can start to see if you're tracking things through HubSpot. The dealer can start to see like maybe their order status and that on gets updated because we're always syncing HubSpot always.

00:23:26

Justin Lobaito: It's always a two-way conversation between this and what HubSpot is and then also this and what your what maybe we feed to the Terlex website or we feed to all the dealer websites. And what's been great is that all the dealer sites every time that I talk with them it's it's very hands-off and that's what they like about they get branded fresh looking website but they don't have to worry about it staying up to date. James and Thomas over at Trust Gave kind of the the best review that I could I could have of the dealer websites is that they he couldn't really trust his previous provider and this is something that the site that I gave them and built for them is everything that they knew they wanted but also things that they didn't even think that they need.

Jack Schroeder: Yeah, that's great.

Justin Lobaito: Yeah. So part of the roll out of this is I have a road map. Um I I I think what this is is a bigger picture um maybe with with you and John about hey here's let's let's get the MVP of this which is let's just replace the current deal portal with this so that now this is starting to feed real user information into it and start and we start to create start to create those connections of like just making sure we're tracking what people are what people are doing so we can start to release things like like the forums like is there a way that we can start to introduce like training materials inside of this so that

00:24:56

Justin Lobaito: and we can use this platform to start to write some of that content to start to think through some of these ideas so that it's just it's easier for you guys to manage communication to your dealers and it's a value ad to the dealers

Jack Schroeder: Did we post our YouTube videos that they've been making in in our dealer portal yet or just a link. I'm not sure. But would that be something like under training,

Justin Lobaito: Um,

Jack Schroeder: you know, where those those videos would go,

Justin Lobaito: 100%.

Jack Schroeder: you know,

Justin Lobaito: Yep.

Jack Schroeder: so we could share those with you. I could have Dylan send those over to you or the

Justin Lobaito: Yeah. If you send those to me, if you send those to me,

Jack Schroeder: link.

Justin Lobaito: I can build out the training section with just those as like the starting. And even there, now we release something that is super quick,

Jack Schroeder: Yeah.

Justin Lobaito: super easy, that is low hanging fruit for us, but may provide a lot of value to the dealers.

00:25:42

Jack Schroeder: Yeah. Yeah. Okay, we'll get that. Uh I think he's on the phone right now, but yeah, I

Justin Lobaito: Yep. So,

Jack Schroeder: will.

Justin Lobaito: this is kind of where I'm I would like to start taking things is folding Terraplex its entire ecosystem into a system like this. Now, what's great about this is that yes, there is AI behind it, but it's not reliant upon AI. Right now, everything you see here is just this is all stored inside of a database that AI helped write and helped formulate, but it can still operate at the end of the day if if something's not if if there's something not working with AI, right? Because this is just already seated with information and knowledge. Same thing with the dealer website. Nothing that is AI when you visit um pyro.com or when you visit blacknejones.com. There's nothing AI about that. AI helped inform the decisions of how we should be positioning things and how we should be um saying some of the content on and and helping think through each of the functionality.

00:26:55

Justin Lobaito: That was a lot,

Jack Schroeder: Yeah. No.

Justin Lobaito: but I'm I'm super excited to keep exploring this.

Jack Schroeder: Yeah. No. Yeah. This is this is really I'm excited. Awesome.

Justin Lobaito: Um so some of the and I'll

Jack Schroeder: I'm just taking it all in and just yeah

Justin Lobaito: provide kind of a a recap after this as well too and we can talk through um like what does it mean now

Jack Schroeder: anxious

Justin Lobaito: to if we want to take the ter site and think through the design of it think through how it's administered um what that would entail and I can kind of work up like what a roll out plan this would be. I do think that um there will be a pricing conversation that we need to have when it comes to when it comes to utilizing system like this especially if we're starting and starting to roll out some of those larger functionalities like a forum and like the marketing assist which is a co-branded marketing material generator. So,

Jack Schroeder: out.

00:27:47

Justin Lobaito: and kind of in the um in the

Jack Schroeder: Hey

Justin Lobaito: long-term roadmap planning, you know, we can have areas in here for Sperlex dealers to start to query information about their stuff. like hey what's what's coming down the pipeline for the I19 what's being what's what's happening with the R30 or you know the ideas that they can have now have a central data source that they can start to utilize as well too this is something that right now is very adminable for me as um kind of the the curator and then you also as the the the distributor level to make really informed decisions but then how can we release some of that knowledge back into the deal as well too. That is more than just downloading materials, more than just um creating materials. So that's kind of like version five down the road stuff. The where I'm at now is just getting recreating what your existing technology is on the dealer portal and getting that into the hub of information.

Jack Schroeder: Got it.

Justin Lobaito: Do you have any you have any questions or anything um for me?

00:28:59

Jack Schroeder: Yeah. um dealer portal will I mean obviously not everyone is on everyone will have this version of the dealer portal when they log into our website I mean regardless if they have their own website or not with you I mean I'm just think that's this yes this will be awful information

Justin Lobaito: Yes. Yes. So, Yep. So what it is is every there's a there's a central HubSpot list which is

Jack Schroeder: Back.

Justin Lobaito: um there's certified dealers which is companies in your HubSpot and then there's I created a list that is fed from that list which is the contacts of those companies. So it's the contacts of those companies that just automatically from day one will have access to this. They'll try to log in. I'm going just even show you here what the process is. So it would be I just have a test dealer here. Dealer at um I log in. It will first see if this email is in that list. And if it is and they don't have a password set, it will prompt them to set a password.

00:30:02

Justin Lobaito: If they do Oh,

Jack Schroeder: once.

Justin Lobaito: go ahead. You're fine.

Jack Schroeder: No, just one sec.

Justin Lobaito: Yep.

Jack Schroeder: Okay. Yes. So, got it. Infall. I'm back.

Justin Lobaito: Yep. So if there is a if they have a password set they can just enter in their password. If they don't have one it will prompt them to set a password and this this user is physically authenticated but the other all your dealers will be syncing from your hotspot

Jack Schroeder: There you go.

Justin Lobaito: basically.

Jack Schroeder: Thank you. Okay.

Justin Lobaito: So they log in and they get met with this and you will have your own version of this as well too.

Jack Schroeder: Um

Justin Lobaito: I know that's not um super well fleshed out, but we can just take a look here. And brand OS is what I've been kind of playing the term what the what the software is behind it.

Jack Schroeder: We have a little bit of a a layer of complexity in that we have um some so I may need to look I you know maybe it will constantly review what that list is or who you have on that list that would have access right so we have we have dealers and this goes to what what are we going to all want on the it it depends on who who they want to have access right when you're starting to talk pricing and their costs things like that sometimes certain employers don't

00:31:31

Justin Lobaito: Yep.

Jack Schroeder: necessarily want the people that need to have access to some start parts of the dealer portal to have all you know all that information or say we have a dealer and then they have a sub dealer. You know we initially weren't going to give sub dealers access portal that was all going to be information that flowed from the dealer just so we

Justin Lobaito: Yep.

Jack Schroeder: controlled you know we respected what their agreements were with the sub dealers. I'm trying to think how that's all going to, you know, it' be nice for sub dealers and some other people to have access for certain parts of it but not for others. So to, you know, is there a permissionbased limit that we can

Justin Lobaito: Yep. 100%. And that can be something that we either set on the HubSpot level or we set it here

Jack Schroeder: do?

Justin Lobaito: in the UI level. So um if if we create like a um we create kind of a structure behind user permissions, we could have one that is just like business owner and that is your your primary contact with the dealer and there can be um underneath them with a different level permissions can be like um dealer employee at a very just dealer employee can get things like the brand assets and the um parts ordering or I mean maybe not, but we can release

whatever features they should have access to and we can work through that together as far as what makes sense as far as a structure of um a structure of permissions because I

00:33:05

Justin Lobaito: know there's also like the I'm not going to botch this term but kind of subcontracted dealers. Is that right? where the dealer's working with somebody else,

Jack Schroeder: Yeah. So like Trust Services has a sub dealer Audi,

Justin Lobaito: but yes.

Jack Schroeder: you know, but they don't have access to the portal, but yeah, it'd be nice if they did for some things like so they could print the manuals off themselves.

Justin Lobaito: Yep.

Jack Schroeder: Just things like, you know,

Justin Lobaito: Yes.

Jack Schroeder: but at at a different permission level.

Justin Lobaito: Yep. Yep. Exactly. Yep.

Jack Schroeder: So,

Justin Lobaito: So that's that's kind of that's things that I I want to explore with

Jack Schroeder: Excuse

Justin Lobaito: with you guys so that we can really build a phenomenal piece of software here

Jack Schroeder: me.

Justin Lobaito: that manages a lot of these things and leverages some some of those AI capabilities that have been coming out lately. I mean that at the end of the day that's kind of like the the big picture that I've been seeing is I've always had this view this view of like a centralized source of information and implemented it with a 12 years ago or so implemented a version of that with a um uh foundation settlement um foundation repair manufacturer and they had dealers that sell their products and that It's always been a passion of mine and it's been phenomenal now

00:34:22

Justin Lobaito: that like we can start to create the actual ecosystem that is driven behind real life data

Jack Schroeder: Right. No, this will be this will be very cool.

Justin Lobaito: knowledge

Jack Schroeder: And I don't I mean I'm probably it's probably going to be also based on what we can afford too, you know, as you work it through it is what you're saying. I mean just like

Justin Lobaito: And and this is where I want to be just completely open is I only can build

Jack Schroeder: what

Justin Lobaito: this as I have people who are using it. And right now I mean Teraflex, you're the you're the first ones. You're the ones that like kind of the quote unquote guinea pig. So there is opportunities here. I'm not just giving you like, oh, it's going to be this astronomical enterprise type pricing because I want to create I want to keep this relationship and I want to create a pricing structure that makes sense so I can still get more and more examples and and use cases where I'm that will then inform how I'm taking kind of the um the development of things.

00:35:24

Jack Schroeder: Right.

Justin Lobaito: I kind I kind of need somebody to help feed me information so that I can build better better

Jack Schroeder: Right.

Justin Lobaito: systems.

Jack Schroeder: Right. Got it. Yes.

Justin Lobaito: Yep. Yep.

Jack Schroeder: Got it.

Justin Lobaito: And I built all this right and I built all of this kind of around the Paraplex knowledge and ecosystem. So that's my starting point. And us working through and figuring out features and functionality that make sense is only going to help me to

Jack Schroeder: Yes.

Justin Lobaito: create a better

Jack Schroeder: Right.

Justin Lobaito: product.

Jack Schroeder: And I you know and I guess you know we all in the green you know as as we bring on new dealers and things hopefully yeah we'll be able to introduce this to them for you too you know and create more business as well, you know, into I'm just thinking out, you know,

Justin Lobaito: Yep.

Jack Schroeder: it it could be a really robust thing as more dealers are added and and utilize your your services and stuff, too.

00:36:21

Jack Schroeder: You know,

Justin Lobaito: Yep. Yep.

Jack Schroeder: that'll be cool and one way we can return the not the but I mean,

Justin Lobaito: I' I've gained

Jack Schroeder: we appreciate all the work you're doing very much.

Justin Lobaito: Yep. I've gained so much insight just by monthly interviewing the six dealers that I have and getting their feedback and hearing what what's working for them,

Jack Schroeder: That can be dangerous as well.

Justin Lobaito: what they struggle with.

Jack Schroeder: There's a few out there that are they're a little hard to please, but we do our best.

Justin Lobaito: Yes, I can see that.

Jack Schroeder: Yes, you have one of them. So,

Justin Lobaito: At least who's the who's the one that's hard to please?

Jack Schroeder: yeah. Oh,

Justin Lobaito: But we don't we don't get the names,

Jack Schroeder: well,

Justin Lobaito: so that's fine.

Jack Schroeder: they're just they just don't feel like they have a lot of information and it's like we're doing the best we can.

Justin Lobaito: Yeah.

Jack Schroeder: We can't reach.

Justin Lobaito: And hopefully this is hopefully this is kind of heading in the right direction of let's create this.

00:37:05

Jack Schroeder: Yeah.

Justin Lobaito: Let's just let's make it let's make sure we're all utilizing a

Jack Schroeder: Right.

Justin Lobaito: central source of information so that we can then disseminate that information across. And that's where that's where the AI aspect is coming into this is the this overall synthesizing of the data and arsing that out into ways that terminology that we use as a Teraplex um entity and terminology that new dealers use so that they can make very intelligible questions or this can make very this software can make very informed decisions and propose information. That's skull

Jack Schroeder: Yeah. No. So exciting.

Justin Lobaito: planet.

Jack Schroeder: So where So I mean you obviously have Teraflex in and then are you kind of hoping to use this model then for as you grow your business like for other companies and things of that nature?

Justin Lobaito: My yes that is the long-term goal.

Jack Schroeder: Yes.

Justin Lobaito: My like immediate just kind of like road mapap is teraplex be kind of the proof of concept that we can pull something off like this. Terlex also has five months of me just more than five months actually.

00:38:22

Justin Lobaito: I think we've been working since October or so. So a long time span of me just thinking through and and

Jack Schroeder: Yes. Yeah. Yeah.

Justin Lobaito: thinking through. And I I started to explore this concept kind of back in November December time. and really started pushing it around um I think January this year of I felt like there was something there. I felt like there is a need here and I feel like I have the mechanism in place to start to execute on that. What I what I really want is not what I really want but like what would be phenomenal is the

Jack Schroeder: So,

Justin Lobaito: entire the entirety of it. Have the manufacturer and the distributor and all the dealers. That's what I that's like the big goal is if we can have all three tiers inside a system like this, then then we've got so much information and knowledge that can just feed so many so many different data points.

Jack Schroeder: Um on that marketing assist one is that such that okay like okay say the cell sheet is in there and if they had downloaded their logo it can just automatically have a spot where it would help to co-brand a document for

00:39:38

Justin Lobaito: on the goal. Yep. It can. So, just to tease a little bit as far as where this is the market is going to be something coming

Jack Schroeder: Yeah.

Justin Lobaito: down later. It can be something where it's it's Yeah. like, "Hey, I have a trade show coming up. Give me a give me a quick PDF that I can have as a h have at my or a quick document that I can have at my trade booth that is branded

Jack Schroeder: Okay.

Justin Lobaito: for um New Heights Egg, but has the appropriate information." That's kind of the that's kind of the deal with

Jack Schroeder: Yeah.

Justin Lobaito: it. Um or the idea with that is that dealers can quickly query and make information

Jack Schroeder: Yeah.

Justin Lobaito: and down the road. I mean there's I have ideas about like offering you know in a way kind of packages from it so that dealers can start to like oh hey give me a entire complete chill package and just think through it and do all the work for me but make sure it's on brand for melex revolution and says it

00:40:45

Jack Schroeder: Yeah.

Justin Lobaito: right.

Jack Schroeder: So, you download probably like the brand standards into there and everything and the

Justin Lobaito: Oh yeah, this has this this has been using the it's got Teraflex brand is in there.

Jack Schroeder: and

Justin Lobaito: It's got the latest Revolution um logos. So I can say like, you know, I can say when I'm doing with with Revolution on a on a dealer site, it automatically knows to pull in the logo next to the name kind of thing. I think Trust does that right now.

Jack Schroeder: Yeah.

Justin Lobaito: Trust has Yep. Right there. It's Revolution logo right inside of it. So if I update the revolution logo, the site gets

Jack Schroeder: Yeah. I mean,

Justin Lobaito: updated.

Jack Schroeder: I I think these Yeah, the websites are looking great.

Justin Lobaito: Yep.

Jack Schroeder: Very very good. Very high tech and love it.

Justin Lobaito: Yeah.

Jack Schroeder: Love

Justin Lobaito: Yep. Yep. It's been it's been and plus was the largest one that I've done.

Jack Schroeder: them.

00:41:39

Justin Lobaito: They had a few more needs and everything with like ground supports. Um but it it pulled it off. There's it started to recognize that there's overlap. I think Josh at New Heights uses the same thing when he's doing um No, sorry, not Josh. Uh uh Teraflex Great River. They offer um what is the term?

Jack Schroeder: Oh, fine. I'm just finishing up a meeting. You can make yourself at home. Okay. Yeah. Do you want to show her? It's just great.

Justin Lobaito: So they offer tendering services which is the skids and the trucks like that. So I saw some overlap there. So now the knowledge source knows the specs about the LED 2424 and when

Jack Schroeder: Mhm.

Justin Lobaito: we when another dealer offers something like that then it doesn't have to go out and try to figure out what the information

Jack Schroeder: Yeah. Do we have that on our website?

Justin Lobaito: is.

Jack Schroeder: I mean, that's what we offer. So,

00:42:40

Justin Lobaito: I don't I don't believe so.

Jack Schroeder: they throw it. Yeah.

Justin Lobaito: that's

Jack Schroeder: So, I mean, yeah, I I think our website's kind of taken a or you know, John hasn't probably given you much more to I think our our website's definitely needs a look at. You're correct. Yes.

Justin Lobaito: that's and that's where I want to start is let's let's think through a rollout plan here. Let's just get like the the quote unquote portal that you have now, but through the system and then we can talk through what the pricing looks like, but then also start to look at, you know, what is your let's start to think through the Teraflex website and making sure that this is also if we're preaching this shared knowledge for the portal for the dealer portal and the websites, the Teraflex should also be doing the same thing. So, um, I would like to take a stab if you if that's something that we can kind of focus on this month of looking at the chairlex website, walk you through rolling out the the dealer portal underneath this new platform and I mean take some time alignment then on on pricing.

00:43:44

Jack Schroeder: Okay. Yeah.

Justin Lobaito: All right.

Jack Schroeder: Is that's that sounds uh good. Are you um Yeah. So what are the next steps on on that then? Or what are

Justin Lobaito: I will I will talk to John to um I've been telling him about what I've been what

Jack Schroeder: you?

Justin Lobaito: I've been building here, what brand OS is um and but I've never demoed it to him.

Jack Schroeder: Mhm.

Justin Lobaito: So I want to kind of do the same thing I did with you for him as well too. So he can at least get um an idea of what I'm talking to and then the three of us can come together and talk about kind

Jack Schroeder: Mhm.

Justin Lobaito: of Yep.

Jack Schroeder: Game plan or Yes.

Justin Lobaito: Does that make sense?

Jack Schroeder: Yeah.

Justin Lobaito: Yeah. So, knowing that we it may be on the table and I I think working on the Teraflex website would be something we do whether we move forward with brand OS or not. Um,

Jack Schroeder: Right.

00:44:38

Justin Lobaito: is there anything I need to do immediately on the website as we start to think through what version two of the website could be?

Jack Schroeder: I think just, you know, kind of like what we I mean, nothing like that has to happen, but I think we had talked about some of those images and and the um you know, is there a place where get a quote or, you know,

Justin Lobaito: Yep.

Jack Schroeder: or something of that nature would be a good good

Justin Lobaito: I'll I'll read through our last meeting notes because I know that we um we did talk through that a bit more and I'll give you kind of like a quick action items as far as stuff I

see that we should just do now inside the craft website and then um I'll connect with John and then I'll connect the three of us to kind of

Jack Schroeder: Okay.

Justin Lobaito: talk through what this looks like.

Jack Schroeder: Okay. Okay, that sounds good. Um, did you I think it worked when I was on the admin part of the portal and I was trying to deactivate somebody.

00:45:38

Jack Schroeder: I think did it I think it eventually

Justin Lobaito: Let me see that.

Jack Schroeder: worked.

Justin Lobaito: So, was it a little access or was it on the

Jack Schroeder: Well,

Justin Lobaito: map?

Jack Schroeder: I thought that maybe if I went into the portal then it would it would sync into the map, but that's two separate things is what you're

Justin Lobaito: They are right now.

Jack Schroeder: saying.

Justin Lobaito: Yes. And that this could be one of the joys of switching and folding into the exist to the new software is that u those new things can be connected when you add a dealer that is let's just say fully onboarded and ready to go you know you can control them inside one spot but if there is a dealer that needs was it Patriot or that was an old one we just we turned off

Jack Schroeder: Uh that was Patriot. Yeah, that so he's not able to So that means he's not able to get into the portal.

Justin Lobaito: okay not Not technically.

Jack Schroeder: Correct.

Justin Lobaito: So, right now they're still underneath users.

00:46:38

Justin Lobaito: Um, and we would say it's dealers here. So, if we look at like they are already gone. Oh, what's the email address?

Jack Schroeder: H I don't know. Um I'd have to look it

Justin Lobaito: It might be August. Might be on this map here.

Jack Schroeder: up. There it is.

Justin Lobaito: Yep. So, they don't have access already.

Jack Schroeder: that there.

Justin Lobaito: Hey,

Jack Schroeder: What?

Justin Lobaito: they already don't have

Jack Schroeder: Okay. Yeah. So,

Justin Lobaito: access.

Jack Schroeder: that worked to I kind of f followed your instructions and did that, but then I didn't know then how to get the map updated, but then I thought, oh,

Justin Lobaito: Yes.

Jack Schroeder: I'll get tricky and just go in and delete the logit longitude and latitude. But then I don't think it allowed me to do that.

Justin Lobaito: it it it does do it, but the thing is this this automatically gets populated once you hit save. It it looks at the address and then plots out the coordinates from the address.

00:47:41

Jack Schroeder: Yeah.

Justin Lobaito: So that happens in the background.

Jack Schroeder: Um.

Justin Lobaito: So every time you save it,

Jack Schroeder: Oh,

Justin Lobaito: so if you deleted and saved it,

Jack Schroeder: yeah.

Justin Lobaito: it just automatically adds it back in.

Jack Schroeder: Yeah. So, I would have to delete the address

Justin Lobaito: Or you can just do what you did,

Jack Schroeder: then.

Justin Lobaito: which is just disable this country. So, right here it says disabled. Um, he he shouldn't be showing up on the on the home page now or on the map. Let me see real quick.

Jack Schroeder: Dylan, she brought some treats if you want to. Yeah. Do you want cookie or some stuff up there? It's not

Justin Lobaito: Oh, I need a zip code. Where is he out of?

Jack Schroeder: Yeah, I do think he I checked the other day and he was out of the m he was off the map,

Justin Lobaito: Okay.

Jack Schroeder: but there was a probably one of his sub dealers that I'm going to take off the map.

00:48:48

Jack Schroeder: So,

Justin Lobaito: Okay.

Jack Schroeder: we'll see.

Justin Lobaito: Yep. So the map is all right inside here.

Jack Schroeder: I just wanted to make sure I had that conversation.

Justin Lobaito: The portal access is inside the users. So users, dealers, you can see all the dealers that have total access from

Jack Schroeder: Okay.

Justin Lobaito: here.

Jack Schroeder: All right. And I do I Okay. Maybe I just was under the wrong Anyway, I'll figure I'll just It It works to kind of email you as I'm in their questions if I need

Justin Lobaito: Okay,

Jack Schroeder: to. Right.

Justin Lobaito: perfect.

Jack Schroeder: I would assume.

Justin Lobaito: Yeah.

Jack Schroeder: I mean,

Justin Lobaito: Okay.

Jack Schroeder: you're okay with that? Yeah.

Justin Lobaito: Yep.

Jack Schroeder: I just

Justin Lobaito: If if you need any support, just let me know. Um and I will do my due diligence,

Jack Schroeder: Yeah.

Justin Lobaito: stay on top of it.

Jack Schroeder: Yes. Thank you for Thank you for when I is it work if I say urgent like when I or like high priority just because

Justin Lobaito: Yes.

Jack Schroeder: I know some things are like whenever and some are like can you do that right away today sometimes.

Justin Lobaito: Yep. If you need me to do something right away, the way you've been communicating,

Jack Schroeder: So okay perfect.

Justin Lobaito: that's perfect.

Jack Schroeder: All right.

Justin Lobaito: All right.

Jack Schroeder: Well,

Justin Lobaito: I will check I'll check over last meeting notes.

Jack Schroeder: very exciting to see what you've you've accomplished and that's that's awesome.

Justin Lobaito: Thank you. Thank you.

Jack Schroeder: It's going to be very

Justin Lobaito: I will I will check over our last meeting notes,

Jack Schroeder: cool.

Justin Lobaito: figure out where um any website updates you need to make and then I will kind of demo what I demo to you to to John and I'll try to get I'll try to keep this moving

Jack Schroeder: Okay.

Justin Lobaito: forward.

Jack Schroeder: Okay, that sounds good. We'll keep in touch.

Justin Lobaito: All right.

Jack Schroeder: Thanks, Justin.

Justin Lobaito: Thanks, Jody.

Jack Schroeder: Bye.

Justin Lobaito: Back.
